DQ Process

The correct way to prepare and transform your information to obtain Data Quality.

Data Quality Process allows customers to prepare, transform and migrate their data to Azure cloud in a controlled manner with the security and quality of receiving the status of the process and confidence of being able to process large quantity of information (Big Data).

Its main features are:

Configurable. Allows to establish the structure of the source and destination tables.

Flexible. Accepts various types of Data Sources (e.g., Xml files, Json files, SQL, DB2, Load Files etc.)

Robust. Allows loading of large volumes of data

Scalable. Fits the client's information load needs, pay only for what you need (storage and processing time).

Transparent and reliable. Allows to know by means of control number the results of the process
