

Busit Application Enablement Platform

For Smart City, Smart Building, Industry 4.0

Busit helps you to:

- Successfully complete your urban or industrial project with a pragmatic approach, thanks to business solutions and ready-to-use applications.
- Accelerate your digital transformation, by facilitating the rapid implementation of Plug & Play solutions for your IoT services.
- Build bridges between operational and IT, by interconnecting equipment and information system.
- Evolve your M2M and IoT services, thanks to an open and scalable solution: "Think Big, Start Small".
- Free yourself from technological complexity, with an understandable approach to the business and an agile methodology.

The platform to build your Smart City, Smart Building, Industry 4.0 turnkey Solutions

Establish bridges between operational and IT departments with ready-to-use management applications for all of your urban and industrial systems

Busit Application Enablement Platform helps you set up a multitude of services, operational scenarios and analysis of large amounts of data.

After collection on the private network or via operators – 5G, NB-IOT, LoRaWAN, Sigfox, RFID, MODBUS, etc. for M2M and Internet of Things – Busit Application Enablement Platform processes the "last mile" of information flows, extracting all their added value and generating vertical solutions for building, urban infrastructure and industry.

These solutions integrate web and mobile applications that provide analysis information and useful steering actions to users, citizens, operators and decision-makers.
