

THE SMART SOLUTION FOR INDUSTRY, LOGISTICS AND TRANSPORTATION

All the innovations (Big Data, IoT, M2M) associated in a single solution.

INDUSTRY

Efficiency, sustainability and cost control

With Busit Smart Industry, you control all the variables (temperature, humidity, consumption, resource location ...) to optimize the use of your industrial equipment and processes.

The large amount of information collected from the sensors is transformed into Smart Data, shared in real time with your information system and its analysis allows to gradually adjust the production cycle.

Based on the management of equipment, Busit Smart Industry is therefore a vector of performance improvement, bringing to the market faster products, reduced costs and maintenance.

LOGISTICS & TRANSPORTATION

Optimization of flows, timing, traceability and safety

Busit Smart Logistics collects and analyzes large quantities of data sent by fleets, pallets (indoor and outdoor location, plate recognition, vehicle body control, etc.) and a wide range of environmental sensors (temperature, vibration, smoke, fire...).

This global solution ensures efficient management of the flows of goods, people and information and makes available to carriers, charterers and shippers decision-making tools for fleet management and optimized load capacity.

By creating bridges between the various transport services and businesses, Busit Smart Logistics improves inter-functional exchanges, collaborative decision-making and is a step ahead of competitors in the sector.

Busit® Smart Industry

Busit Smart Industry is based on Busit software and Cloud solution that makes it fast and efficient handling of all devices and connected services.

Busit Smart Industry allows you to easily and securely connect all the equipments in your city and / or housing, to drive the interactions from its rules engine and to make smart decisions thanks to the reporting and analysis tools.

3 GOOD REASONS TO CHOOSE BUSIT SMART INDUSTRY

GLOBAL SOLUTION

All Smart Industry technologies combined in one solution.

SPEED AND EFFICIENCY

An implementation in Agile mode facilitating the digital transformation and the exchanges between the operational and the systems.

FLEXIBILITY & SCALABILITY

Busit Plug & Play technology simplifies adding new sensors and additional treatments.

CONTROL FEATURES FOR INDUSTRY

Management of automata, fluid, electrical, gas metering, room temperature, air quality, hygrometry, indoor location, noise measurement, QR-code reading.

CONTROL FUNCTIONS FOR LOGISTICS AND TRANSPORT

Fleet management, equipment and goods monitoring, temperature, hygrometry, vibration detection, access control, indoor/outdoor location, smoke / fire detection.

WEB AND MOBILE APPLICATIONS FOR VISUALIZATION AND ACTION

The publication for operational and decision-makers of useful information, cartography, operational or high-level indicators, results of real-time and stream analysis of logistics and transport flows.
