

## SECURE REMOTE MEETINGS WITH ONDATO

ondato

Passwords are no longer appropriate for online meeting security. Ondato created Secure Remote Meetings to assist firms in protecting their remote processes. It is now fully integrated with one of the most popular digital conferencing platforms - Microsoft Teams.

Using an e-signature, photo, or video call authentication, the feature safeguards any business meeting, conference, or event, allowing you to discuss important internal information confidently. With a wide range of advanced technological tools, Secure Remote Meetings are designed to guarantee that only your designated individuals can enter the digital room.

Our solution is already used by the Parliament of the Republic of Lithuania and other companies worldwide. By combining biometric checks with other types of registry checks, we have a verification accuracy of 99.8%. This means that there is almost no room for fraudsters to impact your business.
