What is Seerene?

In a Nutshell

Seerene leverages advanced analytics & visualization techniques to provide a novel **software process mining platform**. With it, software development organizations can – for the first time – observe, understand, and optimize their processes of producing complex software systems. Inefficiencies in the process – typically up to 80% of developer time gets lost (!) – are converted into extra time, enabling you to deliver more value to the business, faster, and with lower costs! Integrating the Seerene platform in your organization will immediately reveal at least 20% extra time that you can harvest.

The Seerene platform analyzes data traces from your development infrastructure and reveals a holistic, real-time view on how your organization works. The platform is a SaaS solution on Microsoft Azure. Designed so that neither source code nor personal data leave your firewalls, Seerene is compatible with all software development environments (Microsoft, Atlassian, SAP, IBM, Broadcom, ptc, CollabNet, etc.) and applicable to all

kinds of development processes (agile, scaled-agile, waterfall, V-model, etc.).

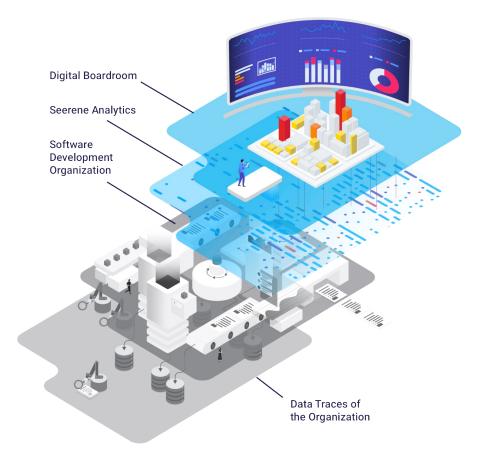

The Seerene Digital Boardroom enables you to strategically steer your business-critical software development organizations to ever higher excellence – with KPIs and actionable insights for board members and executives, as well as for teams.

Executive Summary

FAQ

What makes Seerene unique?

The platform is based on 15 years of research by the Hasso Plattner Institute and has been successfully leveraged by corporations for 5+ years. The domain complexity of software development represents such a large barrier to market entry that there are no similar competitor products. Seerene can process digital traces of all tools in the software development space and converts technical raw data into management-critical insights. This makes Seerene unrivaled as the first and only holistic *software process mining* solution, enabling you to strategically steer and develop your organization to the highest excellence. Software production finally becomes a true engineering discipline with Seerene.

Why is Seerene relevant?

Tailor-made software is becoming an increasingly important source of business value creation and competitive advantage in *all industries*, which is why software factories are springing up in corporations. Hence, software factories and how to run them efficiently is of strategic concern for every company. Seerene's software process mining is the first approach to tackle this business-critical challenge and to convert existing inefficiencies into extra time. This way, IT becomes the business enabler that delivers innovation fast, cost-effectively, and with high quality. The Seerene platform is the only solution today with these capabilities.

How does Seerene benefit the user?

Seerene empowers decision-makers in software development organization to understand how their software production processes can be improved; regardless if the teams are in-house developers or 3rd-party service providers. The Seerene platform serves as the foundation for the efficient allocation and management of development resources, saving both time and budget. The platform thus enables significantly more transparency, strategic management, and security for all stakeholders in the software factory.

The Seerene Value Guarantee: Based on experience in diverse corporate environments, Seerene guarantees to reveal efficiency losses in your software production and to show how to convert at least 20% (!) of this loss into extra time. In short: We enable you to deliver more and faster at lower costs!

Who leverages Seerene?

Seerene is especially relevant for CIOs, CTOs, VPs and team leaders of large enterprises who have IT decision-making authority and interest in efficiency gains. Seerene can add value particularly quickly and clearly in organizations with at least 100 developer FTEs. Here, it is irrelevant whether these developers work inhouse, at external locations, or for external service providers.

Appendix #1

THE PITCH

You manage software development on a corporate level.

Secrene enables you to proactively ensure quality and efficiency.

Secrene helps you to be successful by saving money & developer time.

Find at least 20% of inefficiency!

The Potential Outcome of a PoV

MEDIUM SIZED Company*

- 40 Developers
- Budget: 2.6 Mio. €

In this scenario you save at least
1.200 Developer Days
0.52 Mil. €

SMALL CORPORATE

Software Factory*

- 100 Developers
- Budget: 6.5 Mio. €

In this scenario you save at least

3.000 Developer Days 1.3 Mil. €

LARGE CORPORATE

Software Factory*

- 1.000 Developers
- Budget: 65 Mio. €

In this scenario you save at least

30.000 Developer Days 13 Mil. €

^{*} These saving scenarios are based on very modest/conservative assumptions (only 20% efficiency loss,150 days and 65k € per developer/year) so they are likely to be exceeded in practice.

Appendix #2

Seerene PoV – How does the project work?

Kick-off	Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Presentation of Results
Seerene explains the process and sends you a questionnaire about technical specifications.	Getting to know the tech stack and the strucuture of your data Questionnaire, data probing	Connecting your data to Seerene Local Analyzers (data gathering)		Pre-validating First findings	Data enriching Additional data (3rd-party code checkers, code coverage, .		We show you how to reduce productivity loss in your software production by at least 20%!
You have to spend little time on providing information.	1h You fill in the questionnaire.	1h You may answer questions.	1h You may give input to ensure data integrity.	2h You may give feedback to first results.			

Important Note: Seerene will extract data from the most recent past – so your input data will be ready by kick-off without additional effort.
