

INTRODUCING:

A new offering from Aridhia aimed at individual research teams and projects

Research teams need a **secure**, Trusted Research Environment (TRE), furnished with analytical tools and resources. But what if the organisation they work for isn't yet ready for an enterprise-wide digital transformation?

Our TRE provides the Workspaces component of the Aridhia DRE, packaged as a **standalone SaaS offering**. Start your analysis **immediately** and collaborate with study partners across geographic locations by exploring data and building models in **real time**, or work **asynchronously** with audit trails and notes.

Teams with control of **project-level budgets** and **grants** can get up and running straight away, instead of waiting for their organisation's internal departments to catch up.

Find out more and register your interest online at: aridhia.com/tre

KEY FEATURES
