

Zenith-WhaTap on Microsoft Azure

Zenith-WhaTap is a perfect match for your cloud needs by providing optimized monitoring services on Microsoft Azure, based on the experience and expertise in IT integration monitoring.

What is Zenith-WhaTap?

Zenith-WhaTap provides IT integration monitoring services for infrastructure, applications, and databases on Microsoft Azure. This service checks the health of their system resources, and identifies a variety of issues and causes to maximize the performance of their IT services.

Why customers use Zenith-WhaTap?

- Provided as a Public SaaS, it is easy to initial introduction and expansion.
- No need to build a separate collection server per service, team, or business, and provides integrated monitoring by building a collection server in one place.
- Multi-tenant supports for integrated monitoring to ensure system-specific independence.

Zenith-WhaTap Infrastructure

- Real-time monitoring for Cloud Server Performance
- Support Azure Cloud Platform and Control Service
- Monitor all processes, not just monitoring server resources.

Zenith-WhaTap Application

- Real-time transaction monitoring
- Transaction analysis (Using Active Stack technology: Automatic detection of points where performance issues occur)
- Post analysis & Report (Performance Trend, Hit-Map, Error Statistics, etc.)

Zenith-WhaTap Kubernetes

- Kubernetes-based integrated monitoring.
- Identify correlation(Host, Container, Application) at once.
- Analyze call relationships by service in MSA.
- Manage event alerts as one channel
