

An emergency alert system for Smartphones

Every second count in case of an emergency, with Social Alert you can alert the authorities with the touch of a button.

Social Alert

Social Alert is a multi-platform mobile application that offers a secure way to ask for help in a situation of danger with the touch of a button. The alert will be sent to a monitoring portal where the authorized personnel can see the exact location of the incident and its classification such as medical, fire, or a custom one. With the proximity dispatch, the administrators can identify the nearest security personnel to assign the case and attend the situation.

- Secure communication with their mobile device
- Assigned personnel for alerts
- Monitoring portal
- Reports of security incidents

Mobility

- Access to information from any device or place
- Real time interaction
- 24/7 availability

Optimization
