

Modern Endpoint Management Airlift

What is Modern Endpoint Management?

Modern Management is Microsoft's new way of simplifying device management. Leveraging the power of Microsoft Intune and Azure Active Directory, a modern management strategy allows you to configure, manage, update, and secure workstations and devices using a single cloud-based platform.

Do you need a Modern Endpoint Management Airlift Engagement?

Today's hybrid workforce demands a different strategy for managing endpoints. Gone are the days of users sitting in offices connected to the corporate network. Deploying machines, policies and updates all require new, modern methodologies that are not dependent on the machine being connected to the corporate network. **If you are still imaging machines, using GPO, or requiring VPN access, this is the engagement for you.**

Here's what's included:

- A deep dive into Microsoft's endpoint management and security solutions
 - Endpoint patching and monitoring
 - Conditional Access
 - App Management
- A review of your endpoint management maturity and a detailed plan for achieving your endpoint management objectives
- A Proof-of-Concept engagement tailored to your specific concerns
- End-user support during the Proof-of-Concept engagement

Steps to get started:

With over 2M in cloud deployments in over 70 countries, we have the global experience that you need. We can help by offering the following:

- Schedule a free interactive security demo
- Conduct a Modern Endpoint Management Airlift
- Begin managing the needs of your hybrid workforce in a modern way
