

Always in Touch

The IoT solution
for **workplace safety**,
tele-assistance and **co-working**

Always in Touch is aimed at companies that want to **improve the safety of staff in the workspace**, both indoors and outdoors, and digitize the management of spaces and facilities including **co-working**. The service is particularly suitable for **workers who work alone**, without direct supervision or who work on **construction sites**.

Always in Touch is composed of a **cloud platform based on** Microsoft Azure and a wearable **device**, with low weight and long autonomy, equipped with **2G/4G voice-data connection**, and which allows to identify and manage various anomalous situations and potentially a risk to workers.

ACOTEL AiT ALLOWS YOU TO:

- ❖ Minimize the risks of lone workers or workers on construction sites
- ❖ Reduce intervention times in the event of an accident
- ❖ Alert the maintenance teams in case of particular events
- ❖ Remember a safety rule when it needs to be applied

Main functions for the safety at work of the Always in Touch service:

Abnormal posture / inclination: alarm in case of abnormal and persistent position of the worker

Geofence: alarm for entry or exit from defined geographical areas

Fall: alarm in case of accidental fall of the worker

Speed: speed thresholds exceeded alarm

Total immobility: motionless detection alarm for the preset time

Hands-free call: to or from an Assistance Center

SOS: alarm by voluntarily pressing the SOS button

Voice Messages: broadcast or single device voice alerts

Acotel **AiT**, powered by **Azure**, is a secure and scalable service and does not require any installation at the customer.

Solution adaptable to numerous applications:

TRACKING: continuous tracking of movements on request from Platform (cars, people, animals)

CONTIGUITY: an alarm signals if two or more operators of a team are distant or close to each other

SURVEILLANCE: report on an operator who does not confirm a scheduled check-in

DOUBLE CONTROL: management of two or more operators who must disarm an alarm system

MEMO: voice memos with either vibration or programmed beeps sent from the platform to the devices

Industry of reference

There are many industries that can take advantage of the **Always in Touch** solution, such as:

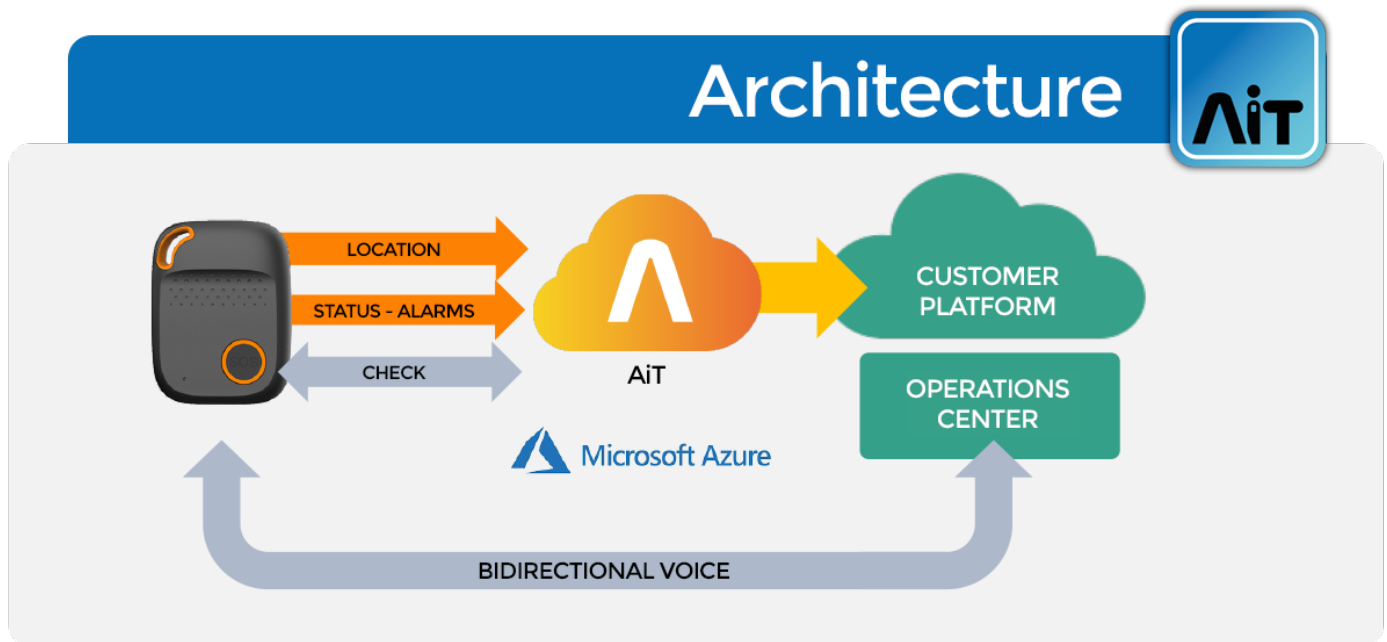

**TOURISM, AGRICULTURE, TRANSPORT, SITE LOGISTICS
LARGE DISTRIBUTION PLANT, FACILITY MANAGEMENT,
SURVEILLANCE.**

SECURITY AND PRIVACY

- ❖ The service is compliant with current safety regulations
- ❖ We collect user data in accordance with the privacy law

The platform continuously supervises the devices to check their **status** and **connection**. When potential risks or alarms are identified (*e.g. entry into unauthorized areas, fall, worker request for help, total immobility*), the service sends the **complete event** with all the data to act to the **Customer Company's Control and Assistance Center: device identification, type of alarm, location, device status, battery level etc.**
