V-DESK

INTEGRATED MODULES

BPM module allows intuitive modeling of processes with the use of graphics editor. The system allows to define enterprise structure and work groups. The configuration with the use of editors offers a wide range of process management options and their adaptation to the changing company needs.

Workflow engine supervises workflow based on the previously defined rules. Thus the solution allows precise definition of work-flow path of every single document type and its adaptation to the dynamic conditions. The system also enables teamwork at every stage of the process.

Electronic archive allows easy and quick search for the archi-ved document and preview of all its versions. Multilevel e-archi-ve security offers definition of flexible permissions model and allows access to documents only for authorized units.

ADVANTAGES OF V-DESK SYSTEM

Time saving

Shortening the time of processing and managing of a do-cument in a com-pany and reducing the employees errors by **43%**

Reduced costs

The costs to archi-ve, manage and process the docu-ments fall down by **23%** in a company
