

## ABOUT TREZI:

For **architects & designers** facing communication challenges, and for **building product manufacturer brands** seeking an efficient marketing platform to showcase their products, Trezi is the **immersive bridge** that **connects** them both. It facilitates real-time interactions with **end-clients** and positively impacts **product discovery**.

## INDUSTRY PROBLEMS

- Poor design visualization as static & passive 3D renders/panoramas are ineffective.
- Multiple, on-synergistic, non-intuitive design tools lacking collaboration.
- Multiple design iterations, delays in design finalization, increased costs and frustration.
- Poor coordination with other project stakeholders (MEP, building product manufacturers, etc.).

## TREZI SOLUTIONS

- Facilitates design reviews and edits with interactivity; allows presentation with a variety of rendering styles and output formats.
- One-click VR walkthrough of multiple 3D design models (Autodesk Revit®, Rhino, Trimble SketchUp®, or FBX®).
- Seamless collaboration across geographies in real-time with project reviews and modifications documented.
- Expandable list of 3D digital assets by architects and manufacturers with VR-ready catalogs to bring into the project seamlessly

## CUSTOMER SPEAK

*“The VR effort was very well received by our client. The time generally taken for the client to understand the design was cut by 50% due to the immersive nature of the VR solution.”*

*- Smita Gupta, Managing Director India Gensler*
