Challenges

Cost optimization on Azure always-on resources.

- Many organizations under-estimated their cloud spending for business continuity and disaster recovery
- Overspending or losing control on cloud resources
- Unexpected cloud costs due to cloud mismanagement are rocking organizations

Ideal Solution

- Reduce annual Virtual Machine costs up to 70% over Pay-As-You-Go prices
- Save up to 80% when combined with the Azure hybrid benefit
- No rigid and long-term commitment. Generous plan available with flexible exchange and refund policy

- Significant cost savings
- Manage RI as desired
- Analytics at a glance

Desired Outcomes

"Using Azure Cost Optimization and Management not only reduces our operation cost significantly, but also allows us to become able to allocate additional budgets on other IT projects to cope with the challenges in the overall IT landscape and retail environment."
- Customer Name, CTO, Company

- More workload capacity at less cost
- Streamlined process to fuel business growth
- Azure consumption visualization

GTI
Azure Cost Optimization and Management

Saving your Azure Spend with Reserved Instances.

Significant cost savings

- Flexible upfront commitment
- Get prioritized compute capacity
- Lower your total cost of ownership (TOC)

Manage RI as desired

- Automated management of Azure RI
- On-demand capacity reservations (in public preview)
- Instant size optimization

Analytics at a glance

- Usage analytics dashboard
- Cost center association
- Key business metrics measurement

GTI Azure Cost Optimization and Management reserves your cloud instances and save annual consumption cost up to 80%.

GTI Azure Cost Optimization and Management + Microsoft Power BI and Azure Reserved Instances

Built upon Power BI embedded technology, providing Reserved Instances (RI) enablement that would save your annual Azure consumption cost up to 80 percent. Saving, managing and analyzing your billing all in a single platform.

Solution Alignment

Empowering your Business with Annual Saving

- Flexible commitment plan available for Reserved Instances (RI)
- Save annual Azure consumption cost up to 80%
- Strengthen operation capacity of predictable workloads and application

GTI + Microsoft Power BI

- Enriching your Azure usage insights, billing reports and Azure Reserved Instances (RI) annual saving on a single dashboard
- Help budget and plan months or even years in advance
- View cost center consumption, billing and saving instantly for a better insight on budget analysis

GTI + Microsoft Azure Reserved Instances

- Providing annual saving recommendation that facilitates business planning
- Reserve Compute capacity in an Azure region or an Availability Zone for any duration of time (in public preview)
- Meet your business continuity and disaster recovery needs, combining capacity reservations with Reserved Virtual Machine Instances to greatly reduce costs
