

Are you ready to  
start organize you  
tasks and have a  
more eficiente day?

Let's start with a global vision about  
**TASKFLY** resources.

## TASKFLY is available for many platforms

You can access your information, stored in a secure cloud, anytime and anywhere from a web browser or smartphone (Android and iOS). That's great! At home, work, on street, you need only an internet connection.

# A tool developed for task and team control!

People that work with you are the key of success, but work with people will be a great challenge. Because of this, team management tools became an important piece in all organizations. Everybody would like that our employees create great results, but a correct management is needed, and without this, you cannot delegate, prioritize and control tasks, and maybe we have a problem.

# Dashboard with overall task view:

**Feito para que você não perca o controle de nenhuma tarefa**

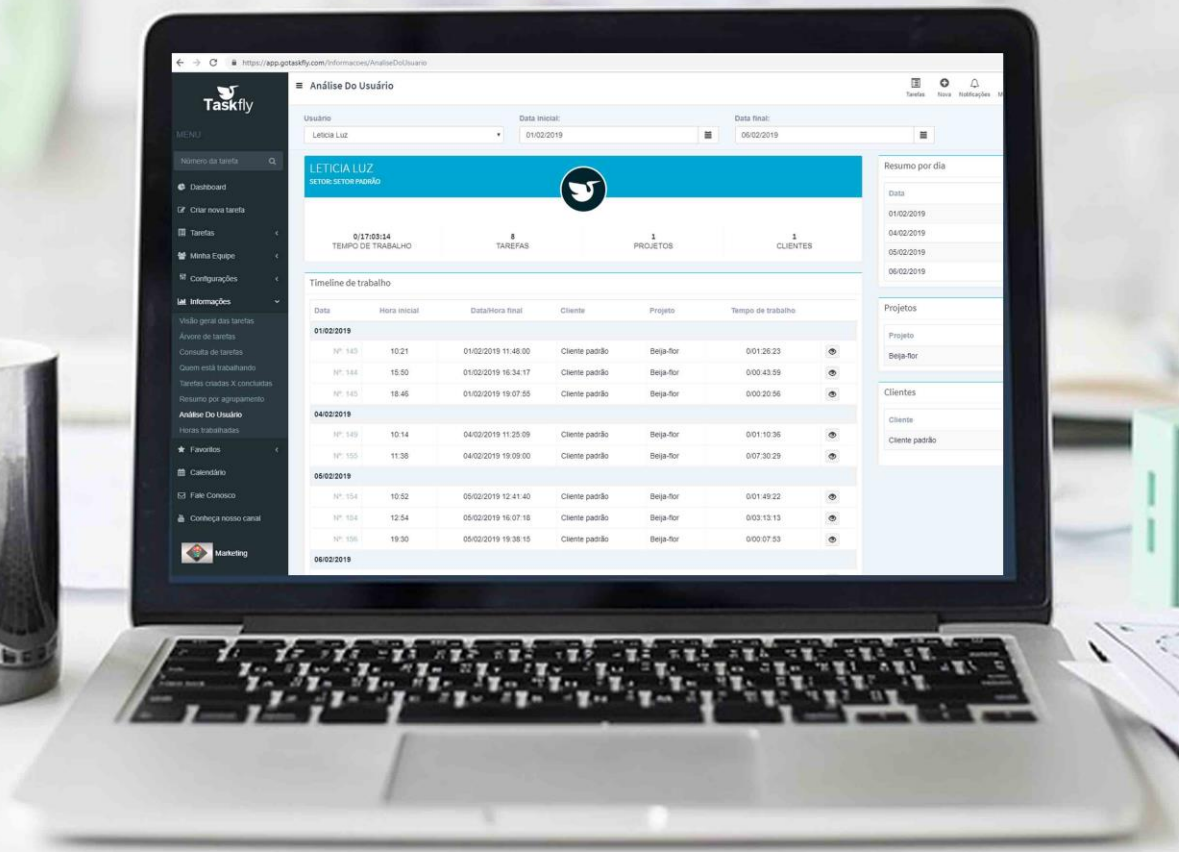

# Productivity

It's essential that you have key performance indexes that validate quality work e if all steps are done with correct time.

Using these information it's possible see erros or aspects that need improvement, besides that, it will maintain a history to check employee execution capacity.

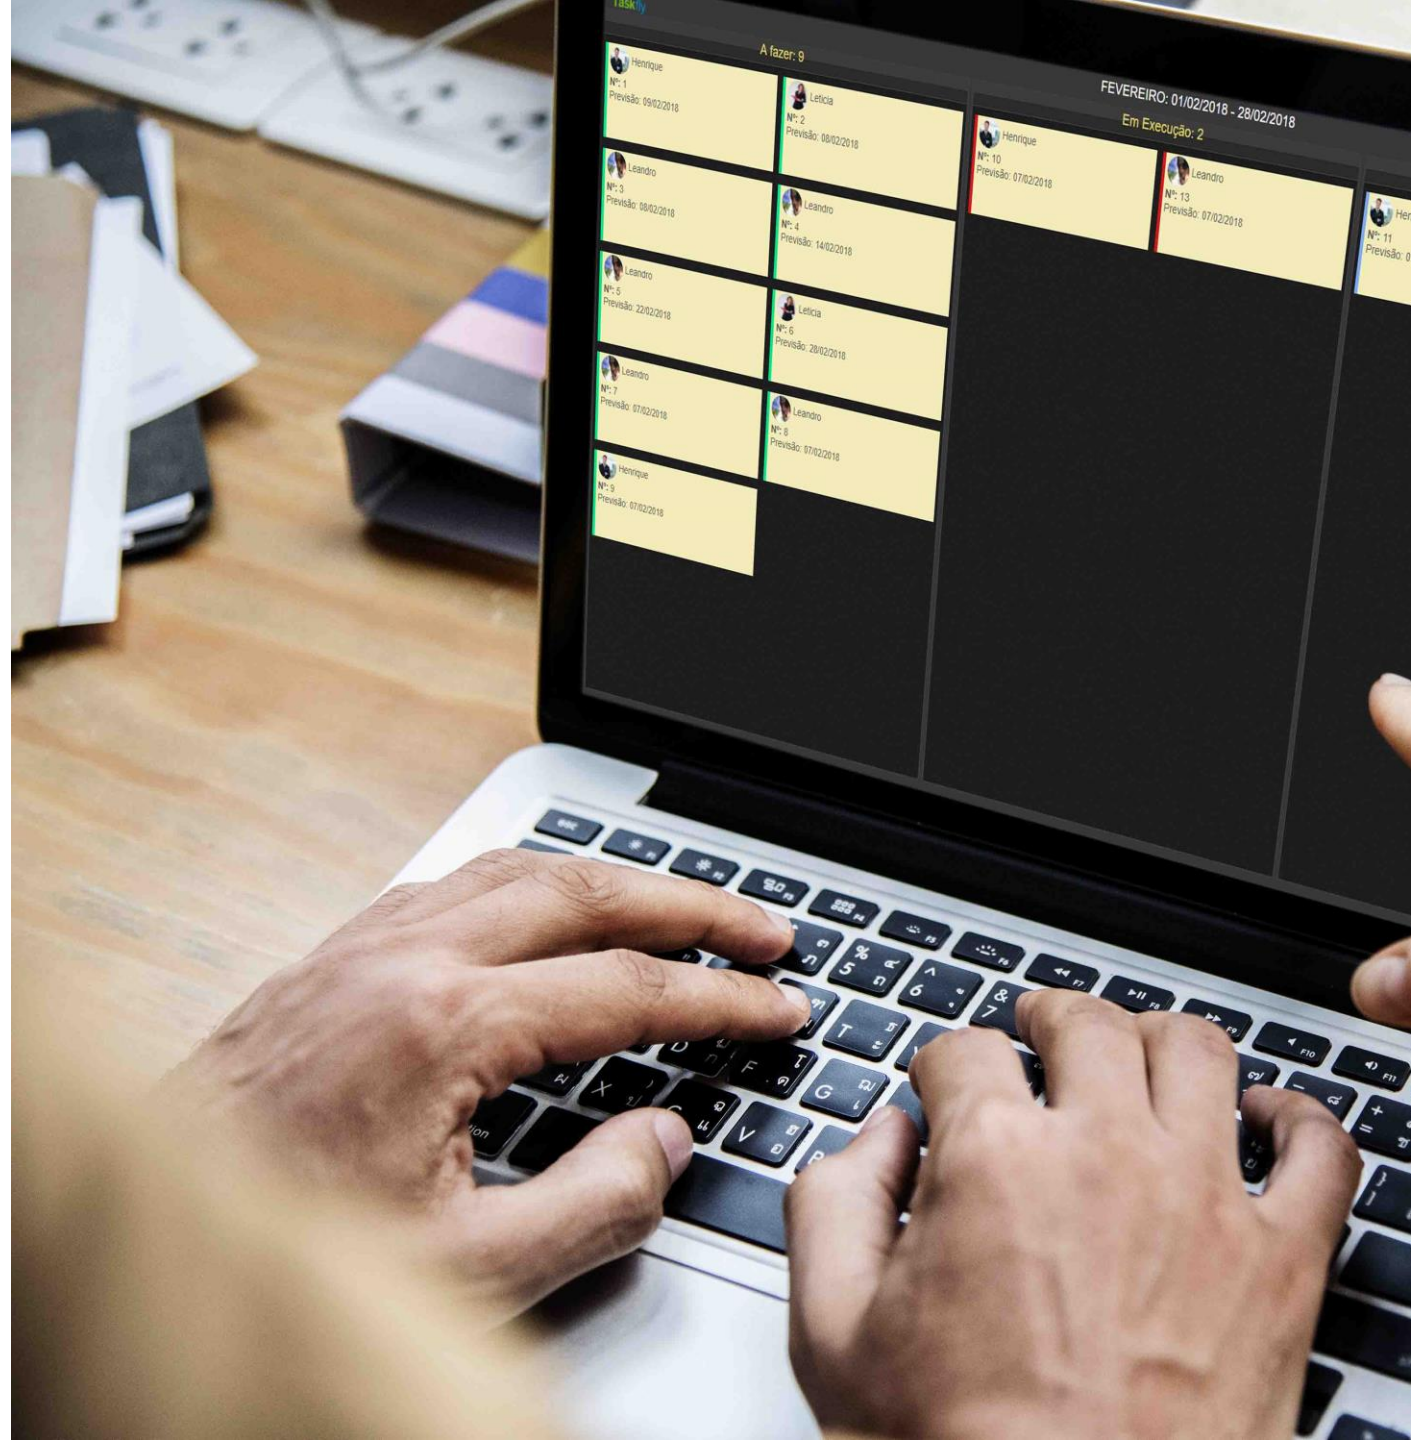

**We have na user analysis for this!**

# Task Management

A good management should follow all improvements that company has. However, to do a great task management, you can use a KANBAN model.

So you will be able to monitor all activities of your team and suggest some improvement or adjustments.

Today, every companies work with many tools and about this scenario we create integration method that you can use to improve you experience with TASKFLY.

Using a sample: a company that use many graphics to manage your bussiness, like a BI system.

TASKFLY has many APIs to you create excelente integrations.

# How many time and who is working now ?

Time tracking it's importante for some companies and TASKFLY has this feature, including a dashboard that show everybody that has your time on.

When a employee is using time tracking, manage can check your productivity, looking for time spend in a task. And this information can used to calculate cost of tasks.

If you are a service company, maybe this tools is essential for your business.
