

Cloud based Identity Management

Robust, secure, adaptive

One Identity & Access Management system for all applications which are used by authorized Customers, Suppliers & Partners

The PlanB. Cloud Identity Management leverages the huge investments Microsoft is doing in Azure Active Directory B2C as an Identity System which is extensible, based on standard authentication mechanisms and secure.

This at-a-glance box

- Easy to use
- Easy to operate
- Secure

Enhanced configuration

- Enables users to have one single login to access all apps
- Comprehensive Self-Service
- Plug 'n play User Journeys

Secure & Standardized

Easy integration in Apps

- Authenticate in a secure and standard way
- Add specific claims on authentication
- API and SDK for integration in all possible platforms

Delegated Management

Delegation

- Enable delegated administration to manage user accounts effectively
- Identity objects (contracts, ...)
- Easy to use delegation setting role based

Comprehensive Self Service

ZEISS used Azure Active Directory B2C to create ZEISS ID, which provides a universal customer sign-in for all things ZEISS. "Azure Active Directory B2C is a huge innovation enabler, because our development teams don't need to worry about authentication when creating applications"

Ralf Cichy, a Project Manager at Carl Zeiss AG

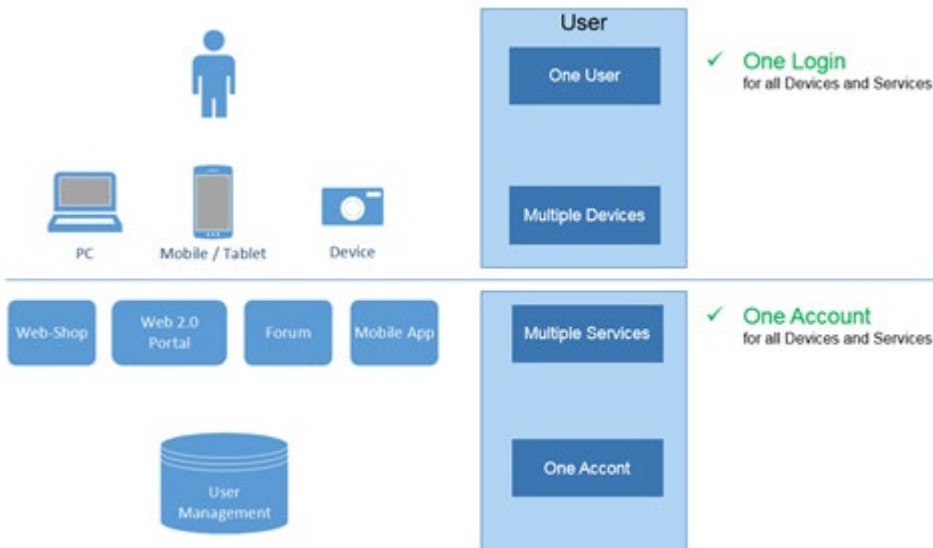

One Identity & Access Management used by authorized Customers, Suppliers & Partners boosts productivity

- One single login
- Comprehensive, easy self-service
- Custom User Journeys

- Delegation model based on roles
- Millions of identities possible
- Scalability and Security as platform integrated approach

- Enables users to have one single login to access all apps
- Comprehensive Self-Service
- Enable delegated administration to manage user accounts effectively
- Authenticate in a secure and standard way

Why PlanB. Digital Product Factory?

Digital Software Engineering is a key component for Industry 4.0 solutions and IoT. The development of innovative and smart digital products is driven by a closely interlinked digital product model that integrates across disciplines. With our expertise in Software Engineering and DevSecOps Engineering, we combine Platform Design & Architecture services, Experience Design methods for rapid development of modern UX/UI and the agile delivery of our Digital Product Factory to a full-lifecycle offering. This makes us a strategic partner in our clients Digital Transformation.

We are passionately thrilled to contribute to our clients' success and are proud of the references and recommendations we got.

Cloud Identity Management Proof

Our promise to you

Test us with a case of integration to the Cloud Identity Management in a joint workshop

An offer to get you started

- Give us an app and we integrate into the CIdM
- You want to integrate your App with Active Directory B2C and you need additional management capabilities and custom user journeys as well as custom claims
- Give us a try with a no-fee workshop
- You get one app integrated
