

# fexillon®: The Digital Asset Lifecycle Platform

The Fexillon platform and industry experts support the delivery and management of buildings and infrastructure from Strategy to Operations.

All from one central Platform.

The Fexillon Platform gives you a complete overview of all build information with day one engagement between the Projects and Operations team, creating a golden thread of information and approved Digital Building record at handover, ensuring soft landings for Facilities Management and providing the foundations to monitor ESG goals on the path to net Zero.

The Platform is built on a custom 6 Stage Framework.

Strategy, Concept, Design, Construction, Handover & Operations.

Each stage creates – a single source of truth, where the Digital Plan of Work manages information delivery, meaning roles, members and assets are always connected.

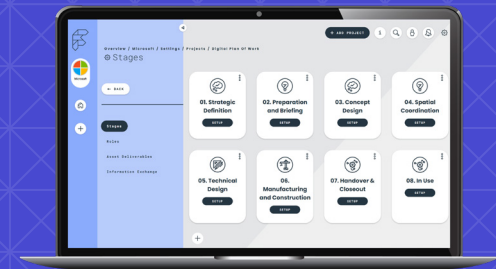

Ensuring access, accountability and enabling effective Facilities Management for the Asset Lifecycle.
