Diagnosis

Situation

The first step of SBAR is to briefly but clearly, describe the current situation. In this step, the nurse will describe the patient's situation in short, basic terms.

Background

After identifying the situation that needs to be addressed, it is necessary to provide relevant background about the patient.

Assessment

In the assessment step, the nurse should state their professional conclusion based on the patient's current situation and background.

Recommendation

this step of SBAR nursing communication is where you recommend an action plan regarding what you think the next steps in patient care should be.
