

Fabric Readiness Assessment

Power business decisions with Advania's Fabric Readiness Assessment

Data structure analysis

- Review of your current data structure and readiness
- Review how to best enable fabric for your users
- Determine the SKU and appropriate sizing for your workspaces
- Determine the appropriate licensing and requirements for users

Secure and compliant foundation

- Review of the existing security policies relating to data requirements
- Identify the needs for sensitivity labels, data loss prevention policies, azure defender for cloud and other security, monitoring solutions
- Identify any potential limitations with existing controls and the fabric solutions to resolve the limitations
- Review how a fabric implementation can improve security and compliance

Upskill

- Review the skills of the existing data team and identify any potential training required to use the fabric resources
- Create a tailored training programme to support data analysts, data scientists, data engineers and citizen / stakeholder developers to adopt fabric
- Create an effective onboarding plan for fabric users

Outcomes and benefits

- A clearly defined adoption roadmap that enables a successful adoption of Fabric
- A review of how the data culture, content ownership and management, governance and business alignment impacts fabric adoption
- Identify opportunities to save licensing and processing costs and avoid costly mistakes
- Help to identify any potential limitations/blockers in the fabric solution, workarounds and upcoming changes from Microsoft
- A fully documented review pack along with the comprehensive presentation and costs/effort for the Fabric implementation
- Identify the method of fabric adoption and resources that meets the needs of the business and utilises the existing skills which currently exist
