

Azure Arc for Kubernetes

4-week Pilot

Azure Arc is a Microsoft solution that enables you to project your on-premises and multi-cloud resources, such as virtual or physical servers and Kubernetes clusters, into Azure Resource Manager. This enables you to manage your resources as if they're hosted in Azure.

Our strategy

Our offer

During this 4-week pilot we will, together with your teams, bring the capabilities of Azure to your Kubernetes clusters.

By doing so, the resulting plan will be able to create a strategy that will allow you to reach your business objectives more easily and be ready to further power your infrastructure with PaaS 2.0 services in the future.

Our approach

To unlock the power of Azure Arc Enabled Kubernetes, Devoteam has defined four stages:

Optional additional services not in scope, to use/combine with ARC.

- Azure Policy
- Cluster Connect
- Microsoft Sentinel
- Azure Monitor
- GitOps
- RBAC Support
- Microsoft Defender for Cloud
