# rm workflow

Streamline your vital business processes and improve productivity through this web-based workflow module, designed to enhance the user experience of the Micro Focus Records/Content Manager (MF CM) workflow engine.

Your business processes will receive industrial strength MF CM security, audit capture, and control over content, while RM Workflow provides all staff with in-depth workflow functionality that is simple and easy to use on any device, at any time. This can all be delivered through a fast 'server-side' only installation, digitally transforming your business processes within days.

Conduct Business Processes with Ease

Users can initiate, modify and interact with Workflows, Activities, Records and Locations from within RM Workflow's simple and easy to use web interface from anywhere. RM Workflow not only provides full access to the MF CM Graphical Workflow functionality, but also provides staff with greater flexibility, simplified work allocation, multiple viewing methods, and progress/status monitoring to maximise the user experience.
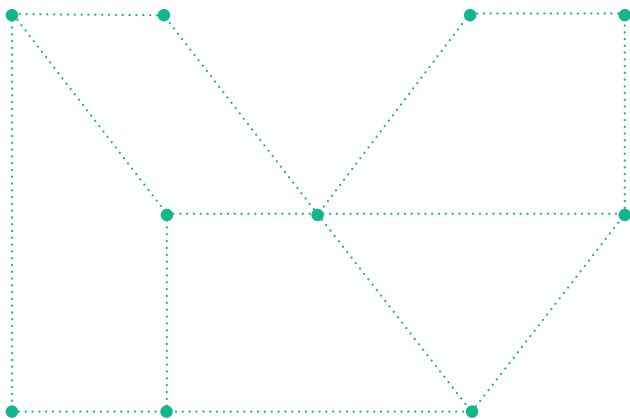

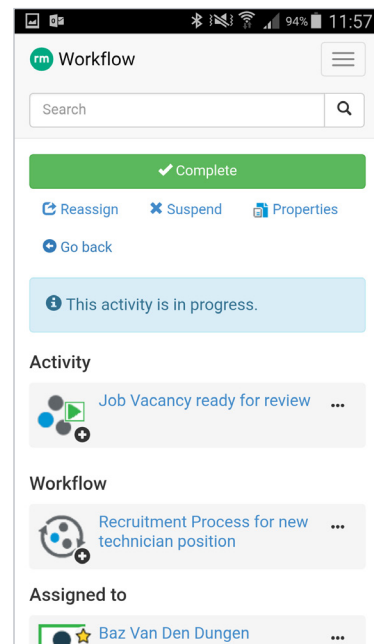

iCognition

RM Workflow expands the functionality of the native MF CM capability, including allowing a dynamic number of users to complete an activity in a workflow. Users can interact with their workflows and activities via a timeline, and also have an Executive Dashboard that can be designed to meet their reporting and monitoring requirements.

Create, Share, and Collaborate from Anywhere

When combined with Microsoft O365 Online, users can create, share, and collaborate on documents from anywhere using online editing, or download documents for offline editing. Users can also interact with their workflow activities via email using "one-click complete" functions to enable busy staff out on the road to approve or decline workflow activities directly within email.

Being a web interface, users can have full access to their workflows and activities from any web-connected device, including mobile phones and tablets.

Fast Digital Transformation

RM Workflow is designed for fast installation to quickly get your business digitally transformed. It is a pure server-side installation that avoids messy software roll-outs, and your existing MF CM workflows will be immediately available via RM Workflow, so you can quickly get on with business.
