

# Leverage on a Power Platform

## About Predica's Power Platform Kickstarer:

### What we offer:

- Our proposal includes a consultancy and strategy built on top of experiences gathered over the past 10 years in supporting, migrating, and upgrading core business-critical systems.
- We will realize the objectives with a platform team. Their members will define a vision and strategy for the application, infrastructure landing zones, and hybrid operations in Power Platform with clear success objectives and key results (OKRs). These measures will facilitate the delivery of the solutions and the achievement of customer outcomes.
- The team will carry out product baseline planning to determine the most viable solutions to deliver the agreed outcomes and then rapidly prove or disprove the hypotheses behind those solutions.
- That way, the team will continually test and search for an ideal solution to deliver the required transformation to the Power Platform adoption

*We aligned IT specialists, business professionals, and citizen developers to reach the shortest time-to-value enterprise solutions in a secure and managed environment with one-click actions, common standards, and observability.*

– The IT Director of a Polish energy provider

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.

## Be future-ready

- Microsoft's continuous innovation supports your development today and your product visions for tomorrow. With +1000 new capabilities in the past year, you can build on the latest advancements in AI, blockchain, Kubernetes, containers, and databases to keep your organization ahead of the curve.
- Our enterprise-grade analytics solution outperforms the competition, costs less, and is fully compatible with your existing development, BI, and data science tools.

## Operate hybrid seamlessly

- On-premises, in the cloud, and at the edge — we'll meet you where you are. Integrate and manage your environments with tools and services designed for hybrid cloud.
- Enhance security, simplify access, and set smart policies across your different environments with a single-identity platform trusted by 90% of enterprises globally.

## Build on your terms

- You always have choices. Thanks to the commitment to open source and support for all languages and frameworks, you may build and deploy however you want.
- Take advantage of the fully-featured, integrated development environments with the built-in support of Visual Studio and Visual Studio Code, the most popular IDEs trusted by 15M+ developers.

## Trust your cloud

- Get security from the ground up, backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.
- With a \$1B+ investment in security R&D and 3,500 cybersecurity experts, security is foundational for Azure.
