Windows 11 Readiness: 2 Week Assessment

Helient Systems LLC

Prepare for Windows 10 End of Life by ensuring a smooth migration to Windows 11.

As a certified Microsoft Solution Partner in Modern Work, Helient is dedicated to providing modern, secure, and agile solutions. Our team of experts is ready to help your organization prepare for deployment of Windows 11 which must be completed prior to October 2025, when Windows 10 is no longer supported.

Helient brings decades of collective experience with enterprise desktop deployment and application management to ensure our customers are ready to meet the challenge of the modern Windows lifecycle. This assessment examines the success criteria for Windows 11 including endpoint hardware compatibility, physical and virtual resource suitability, Windows licensing compliance, deployment methodology readiness encompassing Configuration Manager (MECM), Intune Autopilot and/or Azure Image Builder (AIB) and Office 365 version compatibility.

Deliverables:

- **Endpoint Inventory Review**: An assessment of the physical endpoint hardware encompassing manufacturer driver support for Windows 11 and resource compatibility including CPU and memory specifications.
- **Virtual Host Review**: An assessment of the virtual resource availability including vCPU, physical core ratios and memory allocations for organizations employing virtual desktop infrastructure (VDI) or Azure virtual desktops (AVD).
- **Licensing:** An analysis of license subscriptions to ensure the necessary entitlements for Windows 11 and Microsoft 365.
- **Deployment Methodology:** An assessment of MECM, Intune and/or AIB deployment methodologies and recommendations for improvements.

Agenda:

Week 1: Planning & Discovery

- Collaborate with customer for architectural design sessions. Perform required discovery activities.
  - Align on business objectives and future state goals.
  - Assess end user computing strategy and infrastructure.
    - Remote access
    - Physical endpoints
  - Evaluate Customer licensing and readiness for Win11.
  - Gather inventory and device information leveraging customized queries performed via customer MECM or Intune management platform
  - Gather customer application stack and inventory
  - Endpoint security hardening strategy
    - Security baselines
    - EDR solution discovery

Week 2: Assessment Report Creation and Delivery

- Create written report summarizing findings.
- Perform gap analysis.
- Review findings with Customer.
- Collaborate and define roadmap for future state goals.
