Navigate your cloud journey
3-week maturity assessment

Cloud computing has become the new normal, impacting organizations significantly. This impact ranges over both technical and non-technical domains. Whether you are a newbie or an early adopter of cloud computing, a **cloud adoption journey is**, and remains, **challenging**. On such a journey it is valuable to make a short stop, orient yourself, re-evaluate where you are going and adjust your roadmap if needed.

This is where Devoteam comes in with our **3-week cloud maturity assessment**.

Keep in mind that a maturity model is a tool, not a goal. Devoteam will help you define your desired business outcome.

CMM 0 None	CMM 1 Explorational	CMM 2 Opportunistic	CMM 3 Systematic	CMM 4 Measured	CMM 5 Optimized
No cloud approach	Awareness of cloud potential for existing services	Strategy and approach defined, but not widely accepted	Approach widely accepted	Quantitatively managed by some governance structure	Continuously improve
No cloud elements implemented	Beginning to implement cloud elements	Cloud for new or low risk services	Migrate key applications	Cloud-first strategy	Multi-cloud strategy
		Some level of automation	High level of automation	Standardized and automated processes	Leverage intercloud operations

The far-reaching impact of cloud adoption is daunting and can be paralyzing. Based on your desired business outcome, a limited number of domains will be in scope of the maturity assessment. This limited scope strikes the right balance between depth of justification & time to business impact.

By choosing to work with Devoteam, both your technological as non-technological challenges will be addressed.

What we offer

- Observations and recommendations
- A description of the current state, and the desired target state
- Identification of gaps and barriers
- An actionable plan to close gaps and jump barriers
- A cost – benefit analysis

Our approach

- Focus in line with your business strategy
- Balance between depth of justification & time to business impact
- People: we combine expertise form both business as technology consultants
- Tools: Microsoft Azure cloud adoption framework, Microsoft Azure well architected framework, open Alliance for cloud adoption maturity model, Devoteam best practices

Creative tech for Better Change
