Terminal Analytics Solution

Power BI

UB Technology Innovation's (UBTI's) Terminal Analytics is a ready-to-use plug & play solution. The solution empowers decision-makers to quickly understand and analyse the time taken and the cost incurred for the different activities of the maintenance & repair in the shipping industry. The modern analytical solution also enables the managers to analyse the key performance measurement parameters of Terminal Maintenance & Repair like mean time to repair, downtime, asset availability and so on, and helps the decision-makers to monitor the performance before and after the execution of the preventive and corrective action plans

Terminal Analytics Solution KPIs

Analyse data on the go with smart fields for effective time management

- Mean time to Repair
- Mean time to Close
- Preventive Vs Corrective Maintenance Trend
- Planned Vs Unplanned Downtime
- Asset Technical Availability
- Top 10 asset by Cost and more

About us: UBTI is a Microsoft Gold-Certified Partner, we deliver top-level technical expertise, strategic thinking, and hands-on skills to maximize outcomes. Our team provides a broad range of experience, vendor affiliations, and real-world perspectives that help you prioritize and develop your technology needs. In addition, our certified developers come with exceptional knowledge, outstanding experience, and are genuinely committed to assess and address organizational needs and deliver targeted solutions
