Atos develop and deliver workplaces that are inclusive and enabling, with the use of Microsoft 365.

Define Strategy	Enable Rooms	Transform Meeting Style	Manage
Define the type of meetings (collaborative, conference, training, etc.), number of persons in a meeting, available space	Enable the technical infrastructure, equipment, setup room booking, define usage policies and provide best guidelines.	Meetings should be facilitated with easy to use equipment, and be organized in a structure for success. This phase makes sure that people use the meeting facilities in the best way.	Manage the meeting rooms, measure & report usage, auto detect issues & create tickets, adjust the education and info materials to maximize productivity.

Key Features:
- Office 365 operations are focused on **empowering workforce** and **delivering value** to the business. Change is the goal!
- Office 365 will deliver **continuous enhancements** and operations must absorb the change and bring the value to the end-user.
- **Change management & adoption** is an ongoing activity, part of Office 365 operations, focusing on continuously transforming ways of working.

Atos enables video conferencing systems to join a Microsoft Teams Meeting, using our Global Partner's- Poly or Pexip.

Each user maintains the video conferencing experience they are accustomed to, regardless of the client. Users join a familiar meeting interface, and participants can send and receive video, audio, and content in the same way they always have.

.Users can join meetings using systems from vendors such as Cisco, Polycom, and Lifesize.

Out-of-the-box
Video meeting and calling platform lets organizations simplify video collaboration at scale. Makes it possible to schedule and host meetings instantly on any device.

Manageable
Provides single-sign-on and integration with Microsoft scheduling for easy integration. Includes reporting dashboard for easy management of users.

Distributed
Distributed network of redundant microservices deployed globally. Media stays in regions, all data encrypted and compliant with GDPR.

Global
Runs on a global, dedicated, state of the art video network with media relay to maximize performance and minimize delay.
