 SECURE

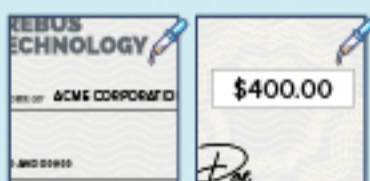

ORIGINAL CHECK

ORIGINAL CHECK

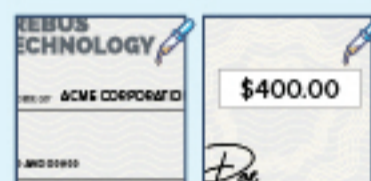

STEP 1

Fraudsters apply chemical wash to remove the payee and/or check amount.

STEP 1

Fraudsters apply chemical wash to remove the payee and/or check amount.

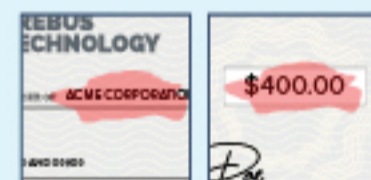

STEP 2

The chemical dissolves the toner, enabling easy lifting from the check stock.

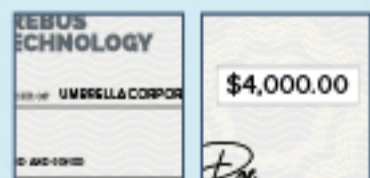

STEP 2

The check is immediately ruined as the MICR Toner Secure releases a red dye, a clear indication of tampering.

STEP 3

Once dry, the check can be reprinted with a new payee and amount, ready to be deducted from your bank account.

THE END RESULT

The check has been completely ruined as the red stain expands and bleeds. Due to the patented security toner, this check cannot be altered and cashed.

This is how MICR Toner Secure helps combat check fraud.

THE END RESULT

This check is now payable to Umbrella Corporation instead of ACME for \$4,000 instead of \$400. Successful lifting by an experienced forgery would make it difficult to tell the check had been altered.

The World's Most Fraud Resistant MICR Toner
