

Elevate24

Privileged Access Management for Mac

User Access Control is an important component of a robust security posture and is a Cyber Essentials requirement within the security industry.

Establishing the correct balance between restricting account access to protect from malicious attacks or inadvertent exposure to threats and minimising the impact to user productivity requires an appropriate technical solution.

The service

Elevate24 temporarily allows users to elevate their permissions from User to Local Administrator. This is done through an easy-to-use application that resides in the Menu Bar once deployed.

As well as selecting a time period for the elevation, a reason for the requirement can be selected for reporting and audit purposes. Further explanation can optionally be added in a free text field.

The benefits

- Define period a user is admin
- Ability to use the solution offline
- Defining a reason through drop down list or free text
- Ability to send reporting data to third party tools
- Customisable branding
- Portal access for reports
- Elevate a temporary secondary account instead of main account to be compliant with Cyber Essentials+ or other security regulations.
- Multi-factor authentication
- Additional security features such as:
 - Demote user on load
 - Kill 'pseudo' terminal sessions
 - Demote any new accounts created during admin session
- Available as a standalone Application – please contact Jigsaw24 to arrange your free trial

Why choose us?

- Jigsaw24 has market-leading knowledge of Apple and its ecosystem. This means we can effectively implement security tooling, whilst maintaining the Apple user experience, which is key to the success of Mac in Business.
- We are industry-leading experts with Apple accredited and certified engineers who deliver the highest level of service.
- We are an accredited Apple Authorised Enterprise Reseller.
- Jigsaw24 services can effectively assess a company's needs and requirements and deliver an effective Apple security package for your Apple estate.
- Our Elevate24 tool is created by Mac Admins for Mac Admins, so you know it's built to address the challenges you actually encounter in your day to day.

What's next?

As an Apple Authorised Enterprise Reseller, we offer all kinds of services, solutions and purchasing options to help you keep your devices and users secure, for example:

- Device management with that helps you control every device in your estate, even if it goes missing.
- We can offer a range of security and DLP-based solutions for your Apple environment by working with leading vendors such as SentinelOne and CoSoSys.
