# Power Platform Center of Excellence

## Empowering your team to get more from Microsoft's technology suite

With Power Platform, the possibilities are virtually endless. Automations, integrations, mobile applications, unlimited ways to capture, disseminate, and act on business intelligence.

It's a technical pillar of the low/no code "citizen development" movement, which democratizes IT to let the people who know their challenges and needs the best — the business owners and stakeholders — actually build the solutions that address those challenges best.

Enabling your whole organization to harness the possibilities of Power Platform as the next generation workplace productivity suite should be top of mind for any IT or organizational leader.

A challenge facing most organizations is often where to begin. How you take Power Platform's endless possibilities and transform them into action and intel?

It starts by creating a Power Platform Center of Excellence within your organization, and Argano can help you build exactly that.

Our engineers and consultants deliver the strategic guidance and hands-on training to build a Center of Excellence and get everyone on your team using Power Platform to its absolute most. We're Microsoft certified in every deliverable.

### Upskill your team, maximize returns

This program consists of a combination of technology, processes and people to facilitate the proliferation, adoption, governance and operation of the Power Platform across your organization.

The goals are to 1) maximize your use of Power Platform and investment therein, 2) upskill your team in a wide range of features, processes and approaches and thereby 3) maximize returns on investment in your team itself.

After this four-week program — designed specifically for each organization — you will both empower Power Platform end users and reduce

### Benefits:

- Tangible outcomes: deploy, scale and manage Power Platform technology
- Four-week program tailored to suit your specific strategic goals
- Use a team of experts to build a team of experts; increase adoption and usage

the burden on IT to build user-specific solutions.

Not only will you enjoy a wider array of custom-, purpose-built tools and applications, but you'll also enable IT to focus on global governance and departmental and organizational builds, ensuring all parties focus on bringing value and driving coordinated business outcomes.

The program includes:

- Tools, processes, best practices and tailored individual training with access to external experts
- Proven, agile project management methodology templates
- Tangible outcomes: build, deploy, scale and manage Power Platform technology that addresses business challenges internally in four weeks
