

Microsoft Intune

Intune is a cloud-based Unified Endpoint Management solution that enables greater visibility and control to keep the people in your organization productive while keeping your data protected.

Simplify device management

Remotely control all of your devices from a single, cloud-based console—manage across multiple device types (smartphones, tablets, laptops) and platforms (Android, iOS, or Windows 10 devices) whether organization-owned or personal devices.

Simplify app management and controls

Easily deploy and authenticate apps while providing simple, single sign-on access for employees for immediate productivity anywhere. Manage policies and apps, to precisely control how users access and utilize data in Microsoft 365 and other mobile apps with integrated data protection and compliance capabilities.

Protect your organization's data

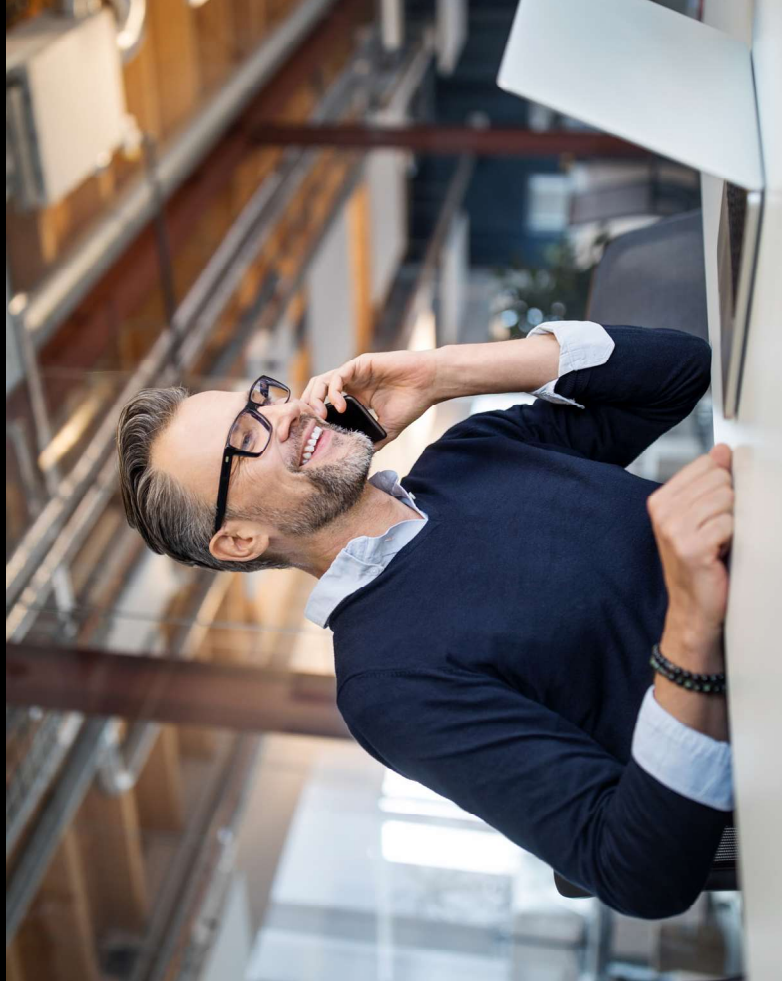

Make sure your devices and apps are compliant with your organization's security requirements. Control and verify who has access to data and specify conditions for users or groups. And remotely remove organization data if the device is lost or stolen.

Manage any use case

Provide all of your employees with the apps and access they need, with the controls and protections to ensure your organization's data stays protected while protecting the privacy of those who are using their personal devices are used for work.

Enhance with Microsoft productivity and protection solutions

Included in Microsoft Premium and other plans, Intune can be used with the Microsoft 365 suite of products including Office and Advanced Threat Protection. And it integrates with Azure Active Directory (Azure AD) and Azure Information Protection for greater access controls and data protection.

Microsoft productivity and protection solutions

Intune device management seamlessly integrates with Microsoft 365 for even greater productivity and security for your organization

- Collaborate with co-workers, customers, and partners.
- Enable secure remote access and protect identity.
- Protect against cyber threats and data loss.
- Secure personal and company owned devices.
