

Blue Horseshoe RSAT – 5 Week Implementation Workshop

Automate the testing of your Dynamics 365 Finance and Supply Chain management (SCM) environment leveraging the Blue Horseshoe Regression Suite Automation Tool (RSAT) Implementation Workshop

RSAT (Regression Suite Automation Tool) is a testing tool that is designed to automate testing for various business processes in Dynamics 365 Finance and Supply Chain Management (SCM). This tool, coupled with Blue Horseshoe's years of industry expertise, provides you with quality tests that ensure the stability of your D365 system after upgrades have been applied.

The Blue Horseshoe RSAT Implementation Workshop significantly reduces the amount of manual testing required after system updates have been applied. The tool is configured and designed to test any customizations, ISV logic as well as D365 base processes across your organization.

Blue Horseshoe RSAT Implementation Process:

- 1. RSAT Installation and configuration.**

This includes installing RSAT and configuring LCS/Azure DevOps

- 2. Business Process analysis and Test Plan creation.**

Analyze the business to identify the processes that must be tested after an update has been applied.

Create the Test plan in BPM/Azure DevOps

3. Create RSAT task recordings.

These are RSAT specific task recordings that are used to execute automated tests.

4. Import the tests in RSAT and execute.

Blue Horseshoe Solution RSAT implementation offering:

RSAT Installation and configuration

- 1 Day
