Digital Twins Enablement
2-Wk assessment
Operating in the Digital Renaissance, asset-intensive companies need to run fast through their digital transformation to gather maximum value out of their assets.
Results & Deliverables

Digital Twins Enablement Report

The insights from the practical workshops will take the form of a structured analysis document. The assessment results will be mapped to the best-fit Digital Twins and Low-Code tools to support them.

Action Plan in Priority Quadrant

Get a precise Action Plan, implemented in a Priority Quadrant, guiding you how to realize the potential of your existing processes and assets portfolio, and learn to use existing business strengths.

Proof-of-Concept Demonstration

Showcase of real-life scenarios built on the Low-Code platform Power Apps combined with Digital Twins' technologies, e.g., IIoT and Artificial Intelligence

Why Digital Twins Enablement Assessment

With Digital Twin Enablement you will receive specific advice and approach for optimizing the relationships between people, business processes, assets, and their management. We will connect the conclusions of the assessment with the goals and appropriate tools for their implementation, based on Digital Twin and Low-Code technologies. Sappience will guide you on how to realize the potential of your current processes and assets and use your existing strengths to increase the profit margins.

About Sappience

Sappience turns the digital transformation strategy of asset-intensive organizations into targeted business results through real-time insights by combining IoT, Digital Twins, and AI into low-code apps.
Our team helps enterprises close this value gap by successfully combining digital technologies with our low-code applications so the business can take advantage of innovations and align people, processes, and technology more precisely.
