

Enterprise Mobility in the digital transformation era to scale-up businesses

Objective

We help clients across the world embrace enterprise mobility as a digital transformational strategy to deliver real, sustainable, measurable, and scalable improvements in business performance. Our holistic EMS framework helps us protect corporate assets with end-to-end consulting, implementation, and managed services.

What do we do?

We deliver consistent and predictable services coupled with our complete access, consult, and transformation processes. As a trusted mobility solutions provider, our professional teams have an in-depth understanding of Sales Force Automation, Field Service Applications, Mobile Internet Sites, CRM, and Location-Based Services.

How do we do?

- Modernize, simplify, and migrate the legacy systems to the cloud
- Design intelligent multi-channel experiences
- Seamlessly connect to cloud-based or custom-built system, workflow, or any data source with or without APIs
- Extend CRM capabilities and improve functionality with enterprise apps
- Salesforce optimized apps to extend CRM, improve business processes, and simplify interaction across a range of industries.

Use Case:

We have robust business acumen and a dynamic understanding of various market verticals. Using our domain expertise, we helped a leading electricity generation, transmission, and distribution company digitally transform with an enterprise application.

The mobility transformation enabled the client to streamline their interaction process, help users register no-power complaints, digitize bill payments, and manage electricity usage hassle-free. The app is a huge success to date with more than 5 lac downloads and above 4.4 ratings in the app store
