WinWire

Tableau to **Power BI** Migration Services

Tableau data visualization and reporting platform are widely deployed across many organizations. However, several enterprises, including Fortune 500, are planning to migrate from Tableau to Power BI due to its increasing cost, higher maintenance efforts due to the need for a unified semantic layer, and persistent performance challenges.

Leveraging our extensive expertise in Power BI migration solutions, WinWire has developed tools and automation frameworks that effectively reduce migration costs and risks.

Accelerate Tableau to Power BI Migration with WinWire

WinWire's **Win** with **Power BI** migration accelerator enables enterprises to adopt industry best visual analytics experience on Power BI by seamlessly and rapidly migrating from Tableau, leveraging automation toolsets and best practices, and reducing licensing costs by up to 75%.

Tableau files metadata are extracted, stored in a database and made available for accelerated analysis.
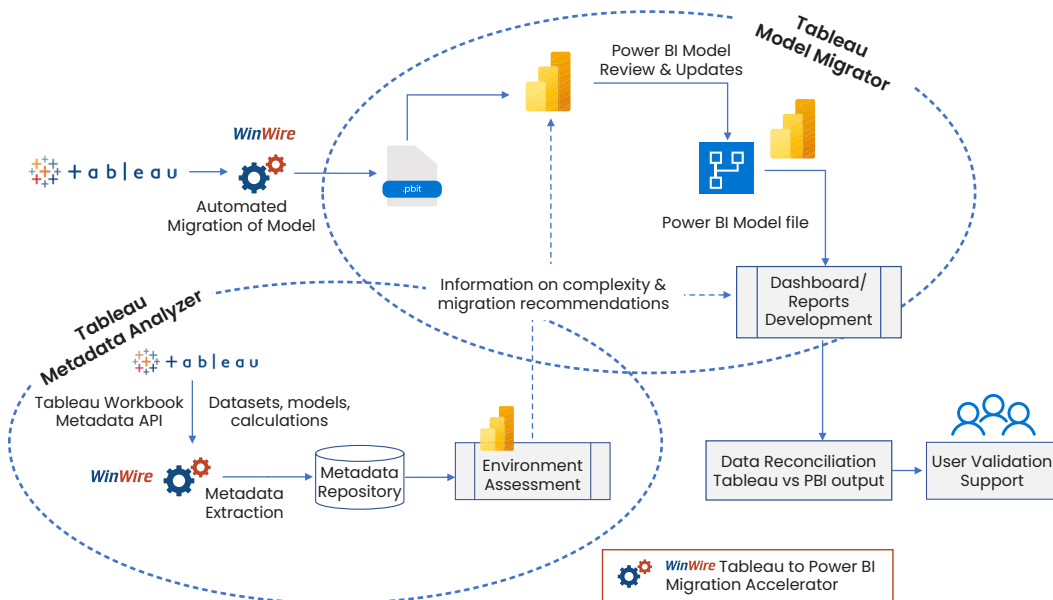

The analysis outcome helps determine the migration strategy, efforts, ROI, and execution plan.

Tableau models are extracted & processed with Tabular Object Model to create Power BI datasets to accelerate the migration process.

Migration Process and Accelerators

Customer Story

A leading healthcare organization migrates their Tableau estate to Power BI in less than 6 months & saves over **40%** in licensing cost.

Key Benefits

- **50%** reduction in model rebuild efforts in Power BI.
- **25% - 30%** reduction in dashboard build / conversion efforts.
- Innovative metadata driven accelerator driving **migration cost savings.**
- **Embedded insights** within applications / processes.

Getting started – 4 Weeks Pilot

- Gain structured insights into the existing Tableau environment.
- Build a business case and a TCO / ROI
- Migration of data models, workbooks, and dashboards
- Comprehensive migration plan.
