

Freedom Systems Corporate AI Solution

Freedom Systems offers enterprises the "Microsoft 365 Copilot Readiness Assessment Workshop" to assist in determining the practical applications and benefits of AI services. We provide suggestions and feasibility analyses for AI value-added scenarios, while also evaluating based on internal data governance and authorization mechanisms, to determine the scope, solutions, and cost-effectiveness of AI service implementation and product deployment for enterprises. We are committed to helping businesses enhance team efficiency through generative AI, advancing towards the intelligent operational goals of the new generation of enterprises.

Feature Demonstration | Case Sharing | Customized Workshops

- **Microsoft 365 Copilot Feature Introduction and Showcase**
- **Insights into Needs and Application Benefits Exploration:**

Assisting enterprise clients in gaining a deep understanding of the application of AI in business scenarios, as well as the key features and common usage scenarios of Microsoft 365 Copilot. Further confirming AI development strategies applicable to clients' IT environments and integration deployment requirements, clearly defining software procurement and other value-added service needs, and planning customized demand demonstrations and series training workshops.

- **Integrating with Microsoft 365 to Effectively Enhance Operational Efficiency:**

Introducing and showcasing the diverse and comprehensive AI services of Microsoft 365 Copilot on Microsoft 365 productivity software, such as the integration of knowledge management systems and services built on Teams' internal interactions, meeting summaries, and actionable suggestions, or the integration of AI-driven services created from data trained by Azure OpenAI Cognitive Service AI customer service, etc., to enhance enterprise productivity and operational efficiency.
