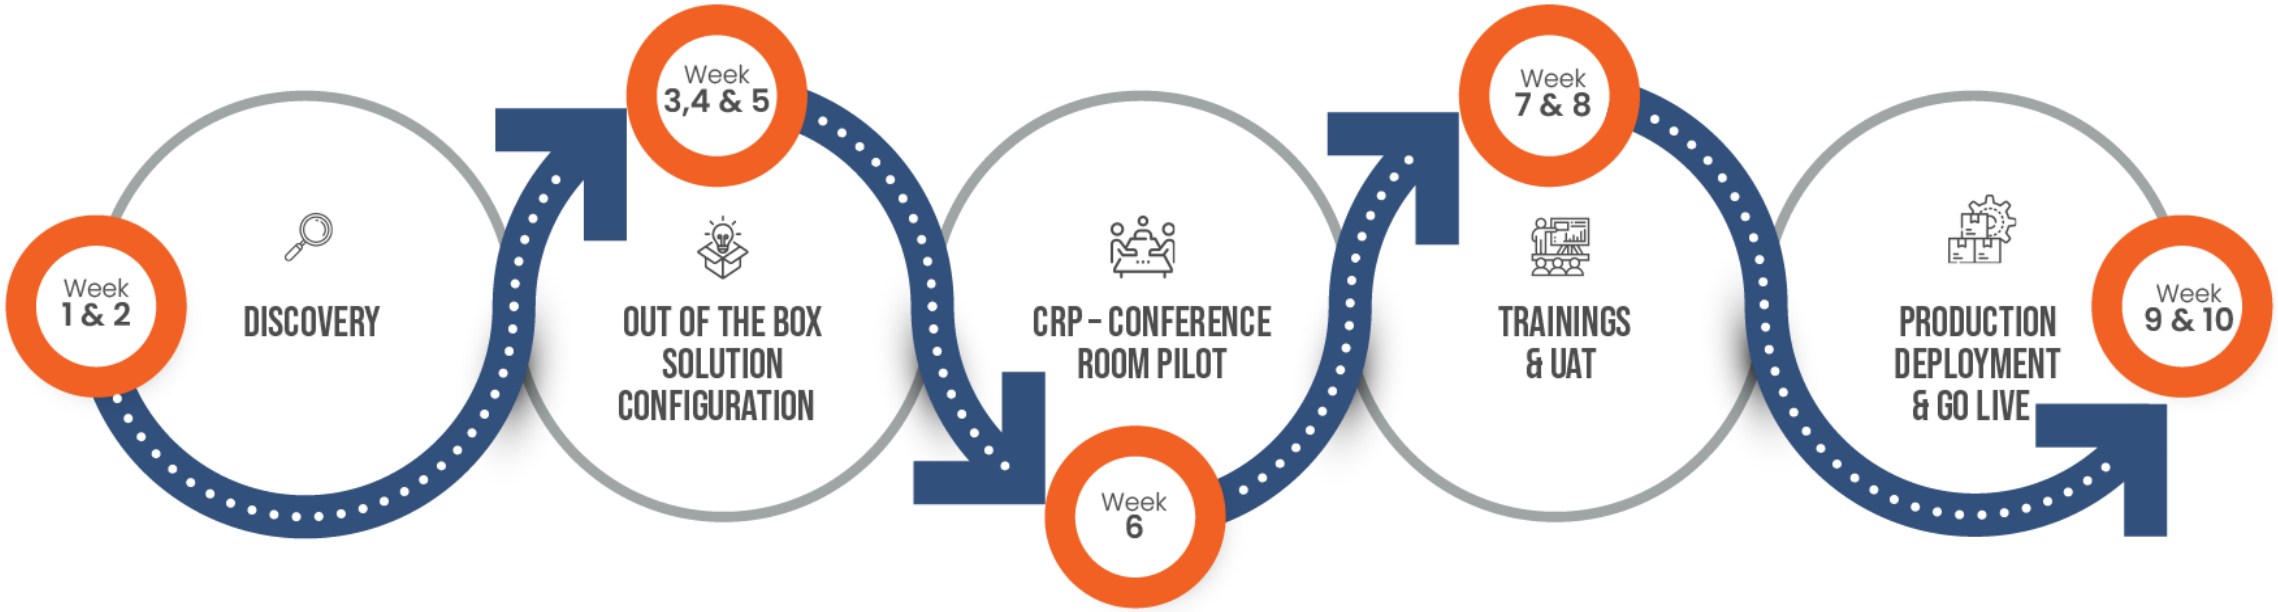
techvista

Transform your end-to-end Asset Lifecycle in just 10 Weeks

with the Asset management add-in for Dynamics 365 Supply Chain Management

TechVista provides **template-based approach** for implementing Asset Management in **Dynamics 365 Finance & Supply Chain**. Our approach includes discovery and design* for a **quick 6 weeks POC** followed by solutioning, trainings and deployment to Production for out of the box solution.



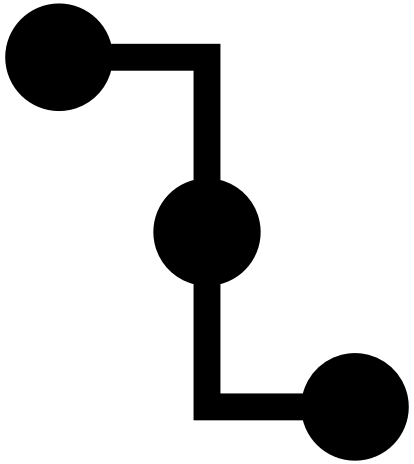
TechVista express implementation methodology

Note:
**This offering is based on assumption that Financials, Inventory & Warehouse and Procurement features are already configured in customer environment.*

techvista

With TechVista offering you will be able to:

- Enable **total cost of ownership** for operational assets and manage ongoing maintenance.
- Manage the full lifecycle for an asset while **keeping track of asset locations** and **hierarchies**.
- Use **preventive maintenance** to track, manage, and monitor assets.
- **Plan—automatically or manually**—using key parameters such as worker capacity, availability, or work order criticality.
- **Track spare parts** to effectively manage inventory.
- **Schedule resources** and consumables for maintenance jobs.



The benefits of Asset Management are that it:

- **Integrates seamlessly** with several modules in Dynamics 365 Finance and Supply Chain Management.
- Enables you to **efficiently manage** and carry out tasks that are related to **managing** and **servicing** many types of **equipment** in your company, for example, machines, production equipment, and vehicles.
- Allows you to **plan** for **maintenance** and track usage and **work orders** for **preventative** versus **reactive** maintenance.
- **Reduces maintenance** costs while extending the life of your assets and ultimately reducing downtime and increasing performance of your assets.
- Supports solutions across numerous industries.
