

# SIMPLIFY PUBLIC CLOUD ADOPTION AND OPTIMIZE IT OPERATIONS

with an Azure Migration Engagement and Nutanix Cloud Clusters (NC2) for Hybrid Multicloud Environments

## SIMPLIFY PUBLIC CLOUD ADOPTION AND BUSINESS RESILIENCE

Repeatable automation translates into real efficiency savings for an organization and reduces business risk and unplanned downtime with simple, resilient, and secure cloud Disaster Recovery.

## PUBLIC CLOUD APP PERFORMANCE WITHOUT COMPROMISE

Storage performance can exceed commonly used on-premises general purpose configurations and meet the performance of high-end on-premises platforms.

## IMPROVED IT AGILITY AND OPERATIONS

Application deployments went from “hours or days” with traditional architecture and processes to “seconds or minutes” with NC2 on hybrid cloud.

Are you looking to migrate an application or an entire data center? Get everything you need for success with an eGroup Enabling Technologies and Microsoft Azure Migration Engagement.

NC2 is a hybrid multicloud platform designed to reduce the operational complexities of running and managing applications in any location, enabling easy workload migration, and extending and bursting applications and data between clouds.

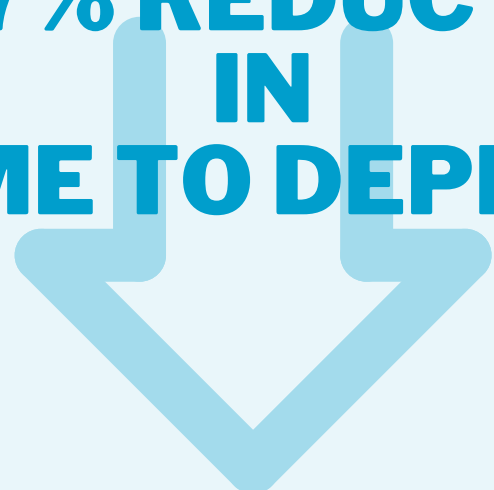

NC2 can unify infrastructure management and migrate applications without retooling across on-premises private and public clouds, while continuing to leverage existing tools and skillsets.

Traditional infrastructure took an average of 38 person-hours to deploy, compared to less than one hour with NC2 on Azure, a 97% reduction.

The IT administrative costs of infrastructure deployment for an organization could be reduced from \$43,939 to \$926 in a single year, a savings of 96%.

IT operations costs for deploying, orchestrating, and migrating applications to the location where they are best suited can be reduced from \$66,251 to \$3,929 in a single year, a savings of 94%.

**A 97% REDUCTION IN TIME TO DEPLOY**

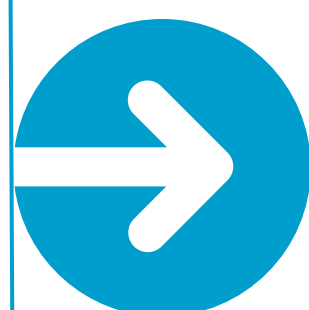

**96% IN SAVINGS FOR COST TO DEPLOY**

**94% IN SAVINGS FOR IT OPERATIONS**
