

It's time for your business to truly transform.

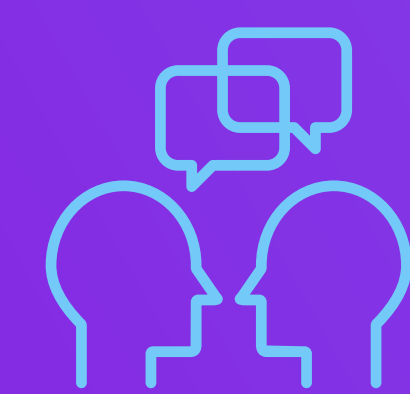

In a post pandemic world, ITSM really needs to change.

83% of tech leaders have changed their IT priorities since the pandemic.

60% of business apps will be developed 'no code' by 2024.

75% of organizations have gained tangible ROI from newer enterprise service management platforms.

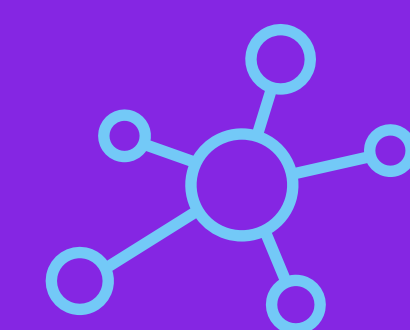

However, legacy tools are still being relied for things like:

Supporting workers outside the IT team

Enabling remote and distributed working

Automating enterprise workflows and processes

How to empower all departments to innovate, not just IT:

ITSM has to evolve into enterprise service management. But what does that involve?

01 Automated workflows and processes built for the world of distributed work

02 Low code development that everyone, from HR leads to sales teams, can easily use.

03 A modern interface that's accessible from any device and location.

That's where IFS assyst comes in. Here's what it includes:

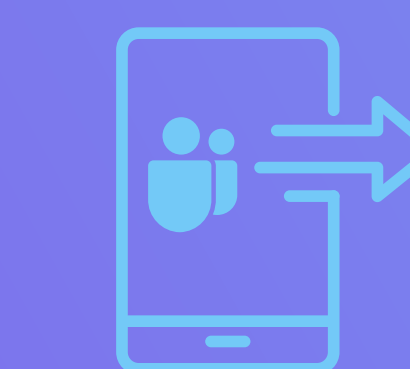

Full mobile access

Brand new virtual chatbot

Full self-service functionality for request and support

Integration with Microsoft Teams so you don't have to leave the app

Increased low-code functionality for non-technical teams

What can IFS assyst do for your organization? [Request a demo](#) to find out.
