

People counting technology for safety and organizational efficiency

ABOUT CROWDSCAN:

CrowdScan offers a privacy-friendly system that identifies, analyses, and forecasts crowd densities to control passenger and visitor flows in public transportation facilities, events, airports, and cities.

See what customers are saying:

"We were searching for a non-intrusive technology to count our visitors in our shopping streets in Ghent. Due to the covid pandemic this need only increased. Crowdscan made it possible for us to monitor our shoppers on a real-time base."

– Sofie Bracke, Deputy Mayor of Ghent for Economy and Digitalization

WHAT WE OFFER

With large-scale movements of people in your facility or at your event, you must identify areas of congestion to ensure the visitor flow is not disrupted.

With CrowdScan you know exactly how many people are present in a certain area within specific time frames, so you can optimize your organizational flow, increase crowd safety and create the best experience for your visitor. We can measure crowds in areas of all sizes and we do this 100% privacy-friendly. Our easy-to-install solution is patented. We don't need cameras, Wi-Fi, Bluetooth, or mobile devices to gather accurate, real-time, and reliable data.

We only use sensors or nodes, a central gateway to configure the wireless sensor network, low-energy radio waves, and cloud servers where all the data is processed and visualized.

Current customers are US Open, Tomorrowland, Antwerp subway station, different cities and Vancouver airport.

Why Microsoft Azure?

Be future-ready

Continuous innovation from Microsoft supports your development today, and your product visions for tomorrow. With 1,000+ new capabilities in the past year, you can build on the latest advancements in AI, blockchain, Kubernetes, containers, and databases to keep you ahead of the curve.

Our enterprise grade analytics solution outperforms the competition, costs less, and is fully compatible with your existing development, BI, and data-science tools.

Operate hybrid seamlessly

On-premises, in the cloud, and at the edge—we'll meet you where you are. Integrate and manage your environments with tools and services designed for hybrid cloud.

Enhance security, simplify access, and set smart policies across your different environments with a single-identity platform trusted by 90% of enterprises globally.

Build on your terms

You have choices. With a commitment to open source and support for all languages and frameworks, build and deploy how you want to. Take advantage of the full-featured, integrated development environments with built-in support Visual Studio and Visual Studio Code, the most popular IDEs trusted by 15M+ developers.

We embrace open source, drive innovation through collaboration, and contribute back to the community.

Trust your cloud

Get security from the ground up, backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.

With a \$1B+ investment in security R&D and 3,500 cybersecurity experts, security is foundational for Azure.

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.
