

Introducing Roam

Increasing employee expectations, a shift in employee benefits towards a more flexible mobility budget. Roam offers an answer to these challenges, while heralding a new era for corporate fleets.

Reduce your company's CO2 footprint

Roam helps you to democratize EV's within your entire organization. Today, these have quite a high purchase price, making EVs an inaccessible option for some. But when you can split the cost of the car between different users, you can give all your employees access to a zero-emission car, significantly reducing your CO2 footprint.

Let your employees be in control of their mobility

Your employees are in the driver's seat with Roam. Thanks to its intuitive mobile app, they can easily book, rebook or cancel a car. If you have different models in your fleet, they can even switch between different vehicles according to their needs of the moment.

Unburden fleet management

As a SaaS solution, Roam is easy to implement and takes little to no IT involvement. This means you'll be up and running in no time, while still having the possibility to integrate with your own systems. Additionally, an intuitive and easy to access web portal dedicated to fleet managers gives them straightforward insight into the shared fleet and its bookings.

Manage your corporate fleet cost-efficiently

The math is simple: when introducing a corporate carshare scheme, you'll have multiple drivers using the same vehicle. This translates into a lower need for individual cars.

Optimize your corporate fleet usage

By sharing vehicles within the corporate fleet, you'll have less cars on standby – neither in your parking lot or in employees' driveways. Your car park will be used and can easily be scaled according to your employees' needs.
