Benefits

Transform collaboration for your remote or hybrid development team

The flexibility your engineering team wants is now available for Microsoft Teams.

Get started

More productive pair programming

Find bugs faster and build better code when everyone can share their console within a single Teams call.

Work together more naturally

Help your teams stay better connected and improve your remote and hybrid workflows with Teams enhancements built by and for remote engineers.

No new applications

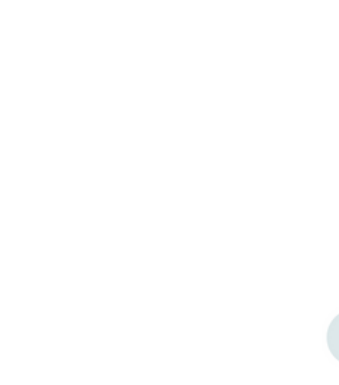

Critical information and updates stay in one central location, reducing the need for additional applications or constant switching between Teams tabs.

Features

Dynamic enhancements for seriously productive software teams

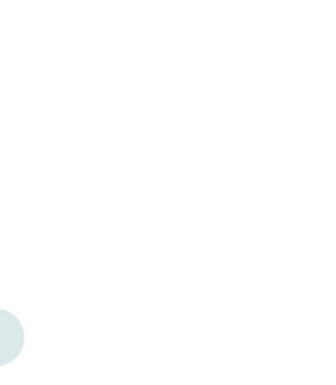

Simultaneous screen share to include everyone

Bring back the feeling of pulling up a chair or gathering together in a conference room with up to 15 simultaneously shared screens and in-call whiteboarding side-by-side. Share documentation, whiteboards, design files, and other assets across shared screens for maximum efficiency.

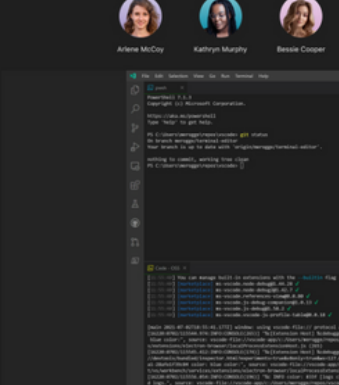

Visible, open-door coding sessions

Create easily discoverable call or persistent project rooms without filling up everyone's calendar. Give your team the option to jump into the right call at the right time to help with a tricky bug or check in on product progress.

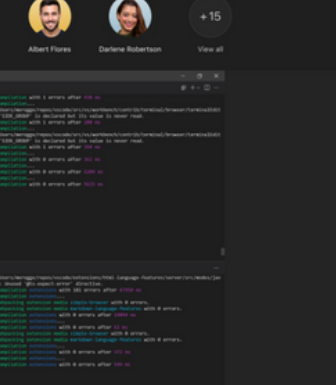

A powerful whiteboard

Dynamic and detailed whiteboarding for task-tracking, crafting APIs, database schemas, or designing architectural approaches together.

Customizable dashboard

A streamlined dashboard for all of your most important notifications so you can stay on top of all of your team and project communications.

Use cases

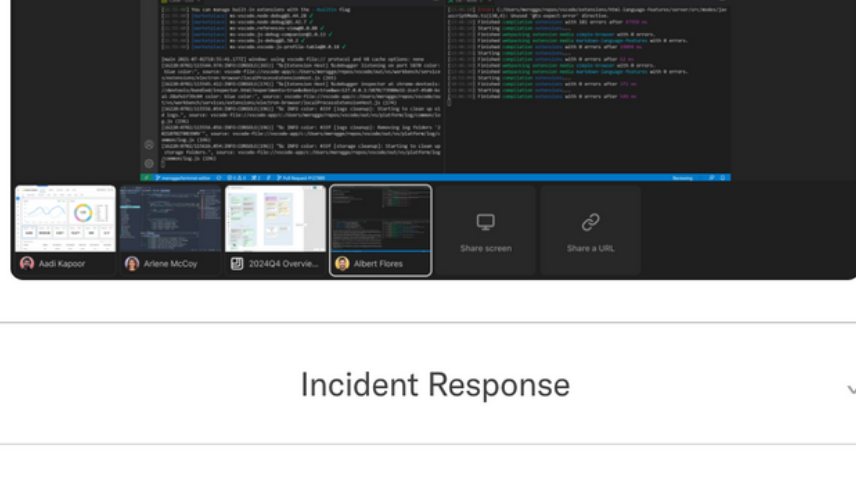

Perfect for every engineering team

Pair Programming

Pair Programming

With tools like multiple simultaneous screen share to reduce barriers to productivity, your remote team can increase both their productivity and camaraderie for an all-around better work experience and more efficient pairing time.

Incident Response

Test-Driven Development

System Design and Architecture

“

Pairing sessions are so much smoother

"It's great to be able to dig into our work and not worry about the tech we're using. Being able to simultaneously share screens just makes sense."

— Andrew, Senior Full-Stack Developer

“

Our teams are more productive

"Since adding Frameable, our teams are getting more done and are so happy to have this new functionality in Teams."

— Dan, Chief Technology Officer
