

Create a connected company with the power of ScreenCloud and Microsoft

ScreenCloud is the market-leading digital signage solution that enables you to share posts from your favorite Microsoft applications to the big screen – screens that communicate. Drive engagement, productivity and operational efficiency using the screens on your walls and the Microsoft content in your systems.

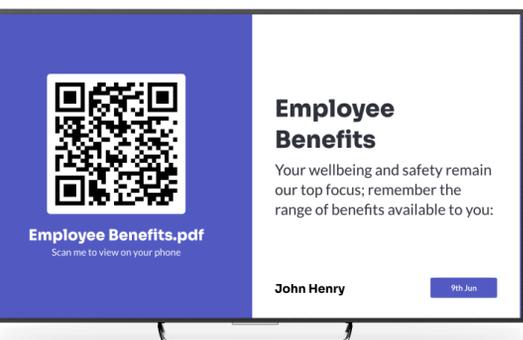

Extend the reach and impact of your Microsoft content

ScreenCloud integrates with your existing Microsoft Apps suite (including M365 and Frontline) allowing you to break tech silos and curate and share content from a range of familiar applications in just a click – remotely and securely. Posts are automatically configured for screen performance and aesthetic; no designer or developer resource needed.

Now, everyone in your organization – from office-based knowledge workers to digitally detached deskless workers on the plant floor – has access to the same information at the same time.

Improve employee engagement

Make your deskless employees feel valued and connected. With ScreenCloud's **Viva Engage app**, the milestones, achievements and shoutouts you share via Viva Engage are on the walls for everyone to see.

Improve operational efficiency

Keep your deskless employees informed and in the loop. With ScreenCloud's **Microsoft Teams app**, publish the messages and quick updates you send in Teams directly to one screen, or thousands, in seconds.

Improve productivity

Empower your deskless employees to do their best work. ScreenCloud's **Power BI app** allows for secure dashboard sharing to screen via Microsoft Power BI, ensuring decision-support data and actionable insights are surfaced in real-time to those who need it most.

And much more...

Get your next **PowerPoint** presentation out there

Set your **Excel** data free

Amplify the use cases of **Outlook, OneDrive, and SharePoint**

ScreenCloud is trusted by 9,000+ organizations around the globe

100,000+ screens powered by ScreenCloud

Consistently high NPS of 40+

Very low customer churn

Hundreds of 5 star reviews on G2 and Capterra

We're better together

We need to communicate value, we need to communicate opportunities and we need to connect with each other. And that's what's really cool about ScreenCloud.

What ScreenCloud and digital screens allow you to have is this instant connection. With just one click in Microsoft Teams, your message is where you need it to be. ScreenCloud is all about getting the right message to the right person at the right time.

Johnny Voruz
Product Owner, Werner Enterprises

The digital signage we used before... it was very difficult for our IT function to manage, and deploy across multiple sites. Bringing ScreenCloud on meant we could expand our use of screens, and seamlessly display production analytics from Microsoft Power BI.

Peter Shankland
IT Manager, Ricoh UK Products Limited
