

# Peace of mind about your cloud with **Cloud Management as a Service**

No worries about setting up your IT environment up and keeping it running

With Telindus' Cloud Management as a Service, your applications run in the (public) cloud, completely worry-free. And that has its advantages...

By only making capacity available when there is a demand, you never have capacity problems and never pay too much. This is just one example of what our service can offer you.

You achieve this by selecting the required resources to run your application from our catalogue. The resources are available in your environment within an hour, and usually even within a minute. Cloud Management as a Service brings unlimited flexibility to your environment by adapting the amount of resources to the requirements of the application,

whenever necessary, in no time.

You provide the software; we take care of everything the environment needs to run the software.

So, you no longer have to worry about your cloud infrastructure and you can fully focus on delivering value to your customers.

In short, you have complete peace of mind about your cloud operation. We make sure your cloud is up and running and that it meets the demands of the workload within a secure, reliable, available, scalable and optimally performing environment, without the need of having cloud knowledge of your own.

## GUARANTEES

With this service we guarantee:

**Time to market:** all your business ideas technically up and running within two weeks

**Agility:** exactly the right capacity and resources available, always and everywhere

**Cloud knowledge:** benefit from cloud advantages without cloud knowledge of your own

**Peace of mind:** worry-free about your cloud; all your IT needs always available and functional

## According to research

- 55% of organizations move to the cloud in order to be able to innovate faster.
- 44% of organizations view the absence of cloud knowledge as the biggest problem (Cloud Survey 2020).

Without that cloud knowledge, you cannot benefit from all the advantages that a (public) cloud offers, such as scalability, flexibility and security. With Cloud Management as a Service you can fully enjoy these benefits, almost immediately. You do not have to bring in cloud knowledge yourself. That knowledge thus remains commercially available.

## Why Cloud Management as a Service?

- Guidance from your functional requirements to cloud implementation
- Your IT infrastructure available with one click
- We always work in accordance with a best practice IT environment
- We deliver a fully scalable environment at lightning speed without overcapacity
- We offer pro-active management based on continuous monitoring
- The environment is managed by our cloud experts
