TakeTask

Digital transformation of operations

For manufacturing, heavy industry, mining, utilities and logistics

Your goal – Consistent execution!

Team

- Familiar with changing guidelines
- Complies with standards
- Fulfils duties on time
- Reports accurately & completely
- Adapts to feedback

Managers

- Receive real-time reporting
- Give immediate feedback
- Base decisions on high quality data

Why you fall short?

Employees struggle with

- Different formats and channels of communication (SMS, e-mail, telephone, WhatsApp, other chat-apps etc.)

- Lack of task notifications and prioritisation

- Limited feedback from managers and colleagues

- Lack of easy access to instructions and guidelines

What is TakeTask?

Operations Excellence

TakeTask is a no-code platform that simplifies management of tasks to ensure consistent and efficient execution on a large scale across many locations simultaneously, for any industry with complex field ops

What we enable?

TakeTask

For managers:

- Easy and highly-customisable setup of processes - no IT support required
- Efficient allocation of assignments
- Objective verification of completed task
- Transparent overview of task completion
- Real-time access to high quality data

For employees:

- Unified communication through tasks
- Prioritised list of assignments
- Instant feedback from managers
- Trainings and guidelines linked with tasks

How it works?

TakeTask

Operations Excellence and Field Force Automation

Watch video

What do you achieve?

Benefits

Work efficiency - better communication and prioritisation of assignments, better gathering of best practices and innovations

Higher safety - better awareness, less accidents, better COVID prevention measures

Reduced losses - less production downtime, lower equipment failure rate, lower costs of maintenance

What do you achieve?

Benefits

Faster execution - faster production line retooling, accessible guidelines, automatic notification, easy reporting

Better decisions - real time, high quality data, A/B testing, internal innovation programs

Integrations - connection to existing systems and sources (e.g. predictive maintenance)

Areas we optimise

Operations

- Fixed assets and equipment management
- Regular and self audits
- Maintenance and malfunction procedures
- Access to guidelines and instructions
- Logistics and stock control

Safety

- Regular verification of equipment and work environment safety
- Employee health and safety checks
- Additional protection measures to prevent Covid-19

Other

- Human Resources and employee motivation
- Knowledge base digitalisation (e.g. best practices, employee innovations)
- Project management facilitation
