

BLUEZONE

DOMZONE

FASTER, PAPERLESS DOCUMENT PROCESSES
FOR PROCESS-RELATED COLLATION, PROCESSING AND DISPATCH OF
DOCUMENTS

DOM-ZONE AND DOCUMENTS

Many documents from different company departments bring multiple challenges, including data overload, search and access issues, and security risks.

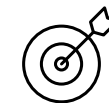

Primary challenges

- Data fragmentation: Decentralized data means that information is available in different departments (manufacturing, service, purchasing, design, etc.)
- Efficiency problems due to data overload, access problems and security risks

Ideal solution

- DOM solution automatically finds the documents belonging to the relevant business transaction and processes them according to specially defined rules
- Process security and maximum transparency in document management are thus ensured

Benefits for customers

- Time and cost savings
- Full ERP integration
- Scalability
- Paperless manufacturing
- Faster operations (mailing, printing, etc.)
- DocuSign® integration

DIFFERENT DOCUMENTS

MANUFACTURING

- Production drawings
- Accompanying documents
- Work instructions

CONSTRUCTION

- CAD Models
- CAD drawings
- Drawings in Neutral/Exchange format

SERVICE

- Maintenance plans
- Documentations
- Manuals

SALES

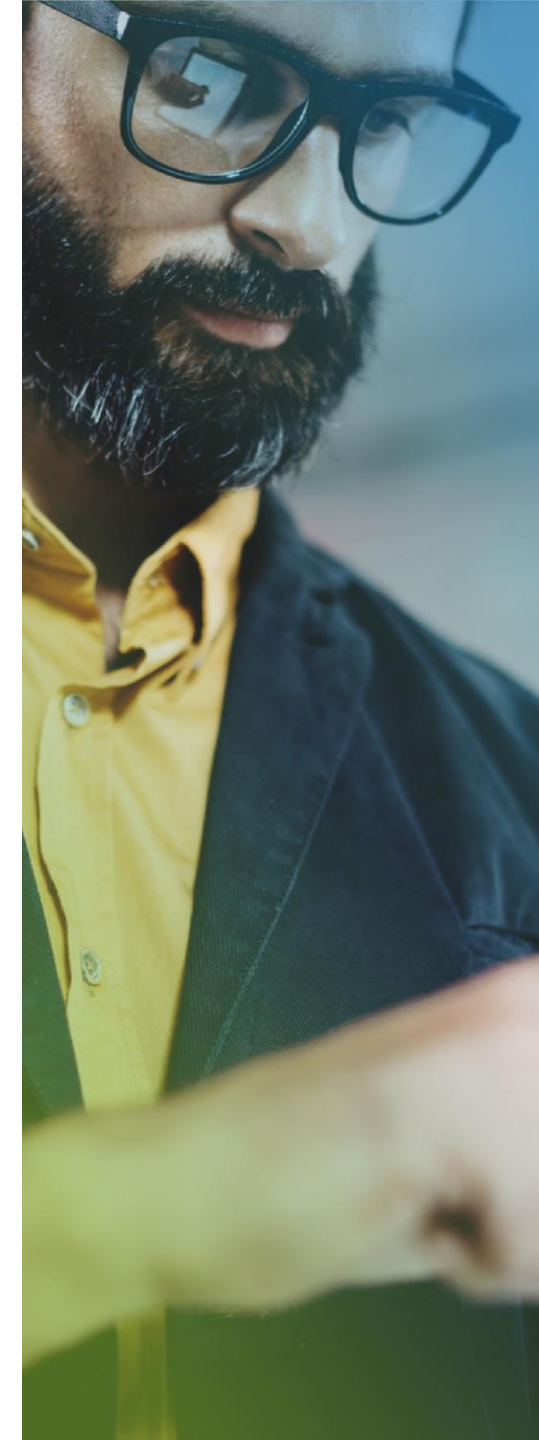

- Product data sheets
- Terms and conditions
- Shipping documents

PROCUREMENT

- Drawings
- Conditions of purchase
- Non-disclosure agreements

QUALITY MANAGEMENT

- Certificates
- Test certificates
- Reports

DOM-ZONE IN MACHINE AND PLANT CONSTRUCTION

BLUEZONE

Mechanical and plant engineering is often characterized by technical complexity, high quality standards and strict regulations. Efficient document management and the securing of technical data are of great importance, as there is a high demand for secure document exchange with business partners including versioning (e.g. for the exchange of drawings with suppliers).

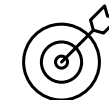

Primary challenges

- Inefficient document management of technical drawings, parts lists and quality documents
- Error-prone document processes
- Compliance challenges and data and document security risks
- Lack of transparency and traceability due to lack of tracking and reporting capabilities

Ideal solution

- DOM solution for process-related gathering, processing and sending of related documents
- Based on flexible rules, further linked documents are automatically selected for generic objects
- This is a decisive advantage, especially in research-intensive industries with complex bill of materials structures.

Benefits for customers

- Increased efficiency (e.g. through dynamic multi-mail recipient determination)
- Cost savings
- Increased document security through access control, encryption, and data loss protection
- Compliance and quality improvement through automatic compliance with regulations and quality standards (by providing revisions, audit trails and controls for documents)

DOM-ZONE IN AUTOMOTIVE INDUSTRY

The automotive industry represents both a highly regulated and a highly competitive industry, where efficient management of documents and information is critical.

Primary challenges

- Increased risk of data breaches and loss of sensitive information
- Lack of compliance: the automotive industry is subject to a wide range of regulations and quality standards
- Waste of time and resources due to manual printing, copying and distribution of documents

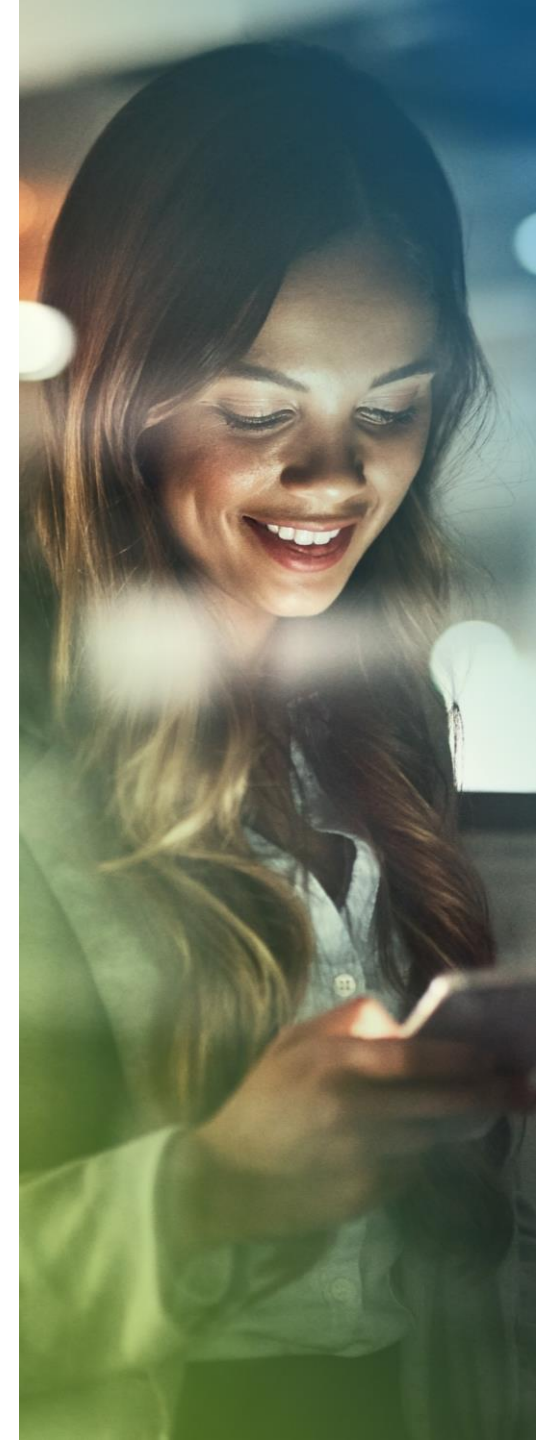

Ideal solution

- DOM solution for process-related collation, processing and dispatch of related documents

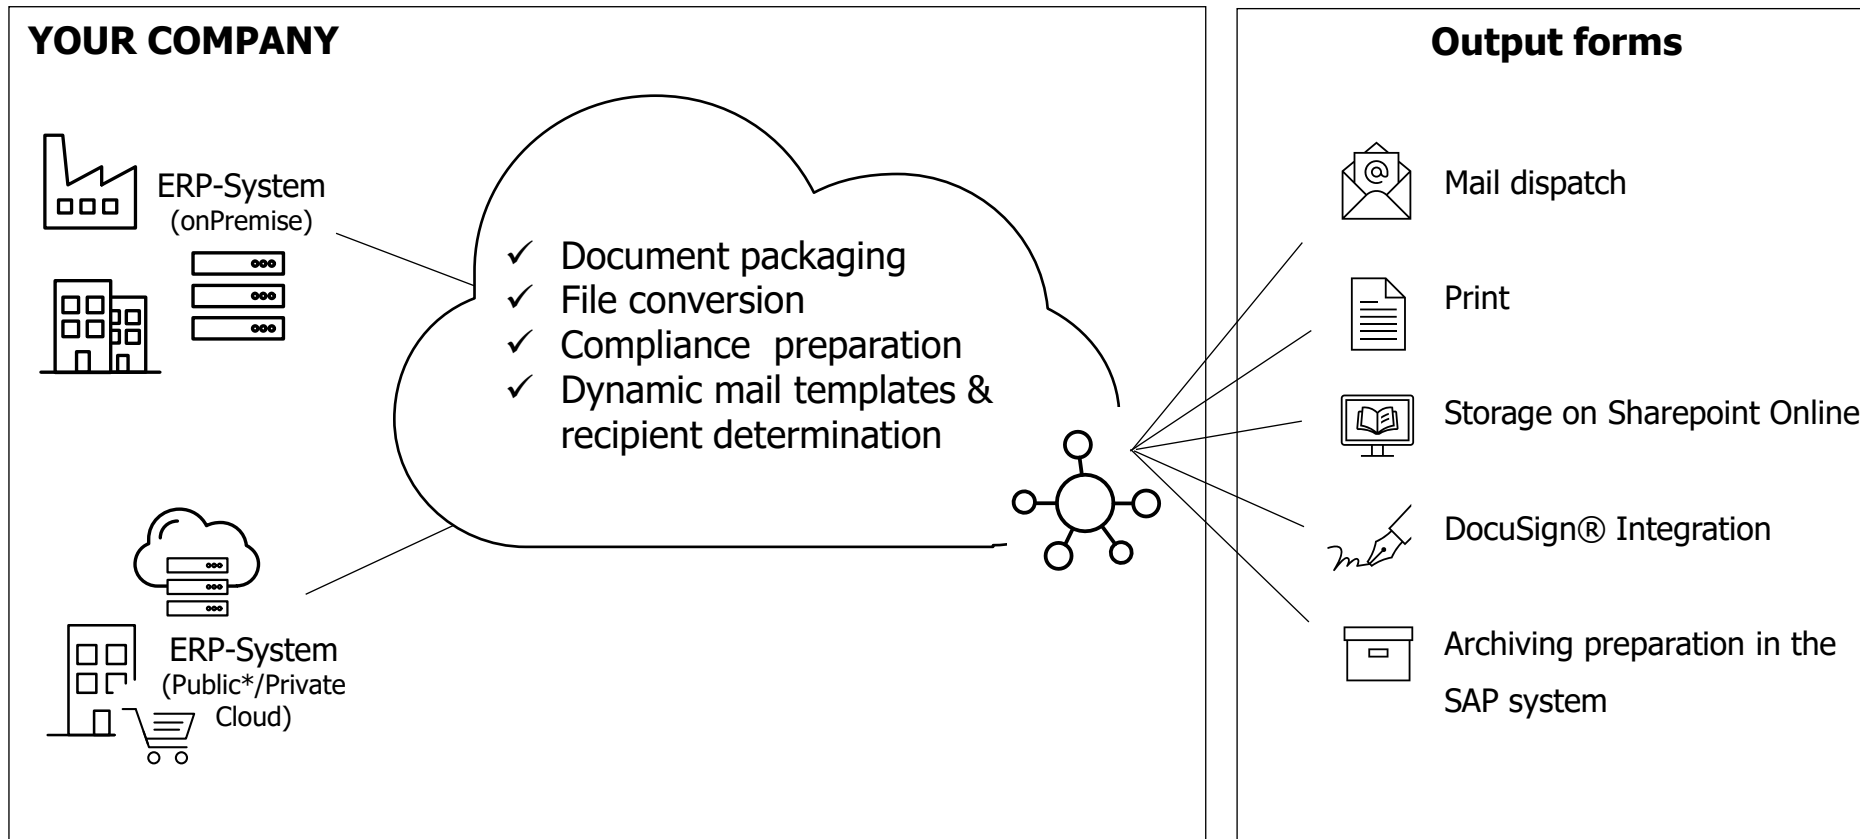

Benefits for customers

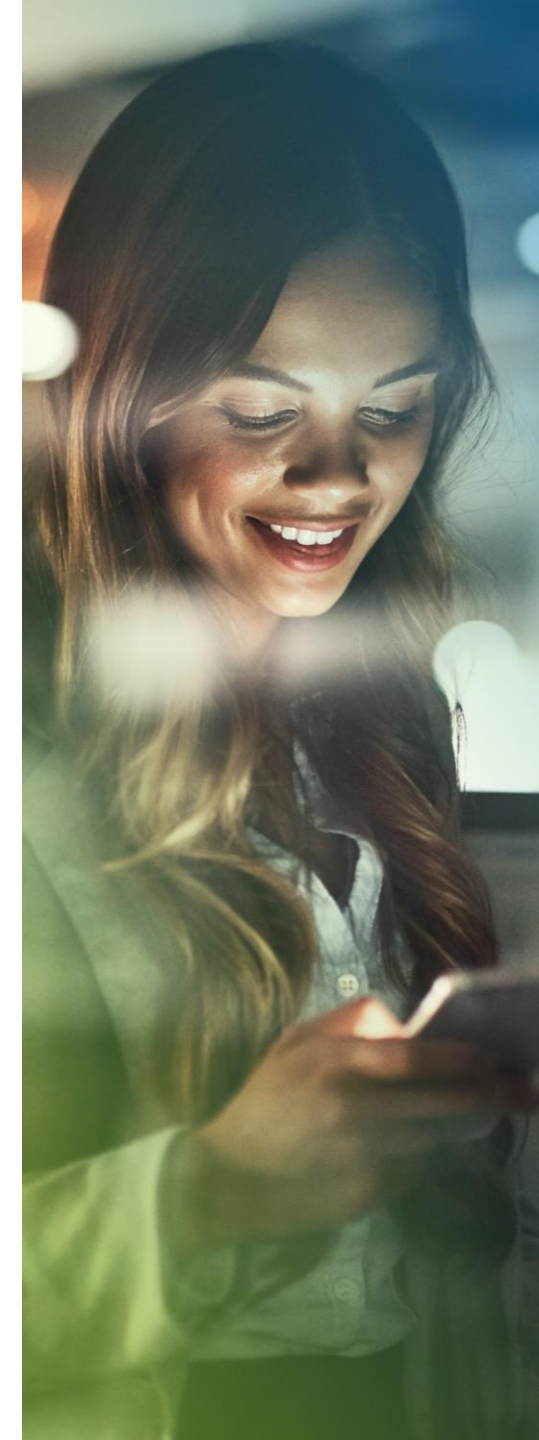

- Efficiency increase
- Cost savings
- Improved document security through access control, encryption, and data loss prevention
- Compliance and quality improvement through automatic compliance with regulations and quality standards (by providing revisions, audit trails, and controls for documents)
