

Microsoft Copilot for Security Readiness Workshop

Empowering enterprises to deal with threats at the speed of AI by the power of cyber-tuned Generative AI

Enterprises globally are facing brand new challenges due to the escalation of cyber threats, compounded by the rapidly changing regulatory environment. Security Operations teams need effective detection and response capabilities to identify risks and prioritize them, which has become a daunting task, especially in a fragmented landscape where organizations use multiple tools to secure their data and environment. This requires teams to deduplicate multiple alerts, manually correlate insights, and determine the nature of an incident across teams and solutions, ultimately resulting in longer time to conclude an investigation.

Our Microsoft Copilot for Security offering brings strength to enterprises that defend business operations through on-demand cyber resilience management leveraging the power of cyber-tuned generative AI.

Wipro's Microsoft Copilot for Security Offering:

Wipro's AI-powered Microsoft Copilot for Security offering is designed to help SecOps, identity management, data security, and compliance teams achieve more with less. Our offering consists of a **Readiness workshop, Quick Start solution, and Security Engineering** program that delivers amplified capabilities and expertise, human-led, AI-powered to ensure a robust defense posture.

Microsoft Copilot for Security is the leading security AI product that combines a specialized language model with security-specific capabilities from Microsoft. These capabilities incorporate a growing set of security-specific skills informed by Microsoft's unique global threat intelligence and more than 65 trillion daily signals. With our security integration expertise, you can improve the efficiency of enterprise SecOps through summarizing vast data signals into key insights to detect cyber threats before they cause harm and put critical guidance and context at security teams' fingertips so they can respond to incidents in minutes instead of hours or days.

Wipro's Microsoft Copilot for Security Readiness Workshop:

Agenda:

- Learn Microsoft Copilot for Security Capabilities with Demos
- Discuss Copilot for Security use cases and persona for your enterprise
- Setup and Configure Copilot for Security for your testing
- Discuss and Define Roadmaps for quick and full adoption

Duration: 1 day

Who should attend?

- CISO/CIO
- Cybersecurity Architects/Administrators
- SecOps Team
