# Scale3

The easiest way to deploy, secure, monitor, and debug your web3 infrastructure.
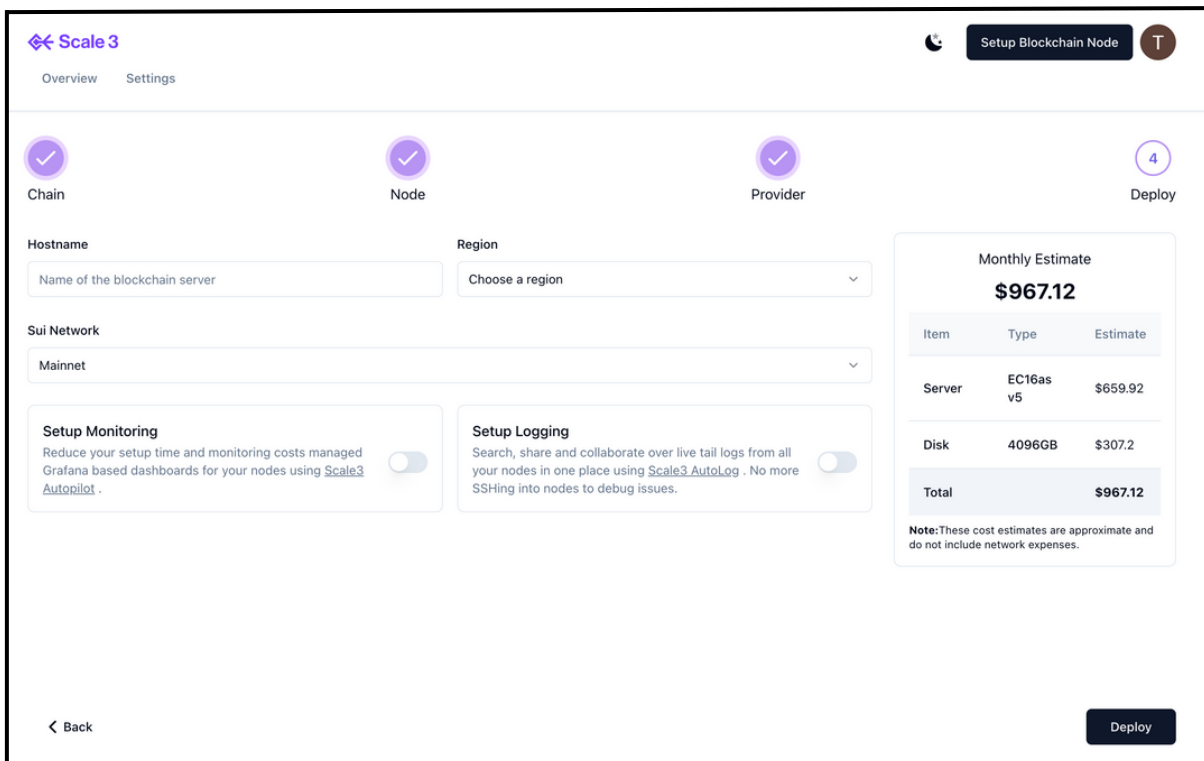

- **Deploy** your blockchain nodes within minutes on any cloud (AWS, Azure, GCP) or bare metal provider

- **Analyze and monitor** your blockchain nodes in real-time to detect and prevent issues before they happen

- **Stay informed** of key insights spanning from node updates, ecosystem announcements, and critical changes

Optimism / Base	Cosmos
Polygon	Solana
Aptos	Harmony
Avalanche	Near
Flow	Filecoin
Sui	
Ethereum	... and adding more chains.

Scale3, built by former Coinbase engineers, is the go-to web3 infrastructure platform for developers and teams looking to seamlessly and securely deploy and manage blockchain nodes and validators. Scale3's platform streamlines all aspects of blockchain node and validator operations end-to-end, providing you with all the data needed to understand how your infrastructure is performing.

Provision and Deploy

Developers looking to build products and applications on the blockchain need to run nodes or validators, depending on the specific application. With Scale3's Nodepilot, not only can you setup a blockchain node or validator within minutes, but also enjoy the freedom of choice with support for GCP, AWS, Azure or bare metal providers, ensuring maximum flexibility for your infrastructure needs.

Monitor

Using Scale3's Autopilot platform, you can spin up customizable pre-configured monitoring dashboards for their blockchain nodes to understand the overall performance of your infrastructure operations, reducing setup time and monitoring costs significantly.

Activate Real-time Alerting

Using Scale3's Autopilot platform, you can also enhance the security of your infrastructure by setting up real-time alerting for blockchain intelligence, host-specific, and validator-specific insights, enabling you to proactively stay informed of the latest developments to ensure no disruption to your infrastructure operations.

Stay Informed

Stay updated on node updates, pivotal ecosystem / Discord announcements, and critical changes with Scale3's Blockchain Intelligence APIs. Gain a proactive edge in managing your web3 infrastructure with seamless integrations to your internal systems.

Collaborative and Intelligent Logging

Using Scale3's AI-enabled and collaborative logging solution, Autolog, you can stream, search, filter and debug any issues from Scale3's platform. Additionally, you can receive a comprehensive summary of your logs, highlighting any critical issues and providing actionable recommendations for addressing them promptly.
