

Protect your
Identity & Data with
ZeroTrusted.ai's
LLM Firewall

It's Like DuckDuckGo for ChatGPT

Anonymity, Privacy, And Reliability

API Integrations with LangChain and Others

Our Advanced LLM Firewall API seamlessly integrates with the LangChain framework, enabling customers to effortlessly detect and sanitize sensitive information within Retrieval-Augmented Generation (RAG) data, leveraging the power of the Faiss Vector Database.

This integration ensures that your RAG data remains secure and compliant by identifying and cleansing any sensitive elements, all while maintaining the integrity and utility of your data for enhanced generative applications.

```
www.zerotrustrusted.ai

# Import necessary libraries
import faiss
import langchain as lc
import zerotrusted as zt

# Initialize Faiss indexer for similarity search
# Assuming a pre-trained vector index exists for similarity search
index = faiss.read_index("path_to_vector_index")

# Initialize LangChain and ZeroTrusted clients
lc_client = lc.LangChainClient(api_key="your_langchain_api_key")
zt_client = zt.ZeroTrustedClient(api_key="your_zerotrustrusted_api_key")

def encode_query(query):
    """
    Function to encode the query into a vector.
    Assumes a function to convert text to a vector using a pre-trained model.
    """
    ...
    return vector

def decode_result(result_vector):
    """
    Function to decode the result vector into understandable format or text.
    Assumes a function to convert a vector back to text or a meaningful format.
    """
    ...
    return decoded_result

def sanitize_data(data):
    """
    Sanitizes the provided data using ZeroTrusted.ai's sanitation function.
    """
    sanitized_data = zt_client.sanitize(data)
    return sanitized_data
```

1 Keep your Prompts Anonymous

Generate SQL insert command using the following details: Cardholder Name: Alex Johnson Card Number: 1234 5678 9012 3456 Expiry Date: 12/24 CVV: 123 Transaction Amount: \$200 Merchant Name: Tech Gadgets Online Store

2 Protect Data from LLMs

Large Language Model Firewall

- Processing compliance
- Sanitizing data
- Ingesting LLM APIs
- Detecting prompt injection
- Detecting Hallucination
- Evaluating reliability
- Running final checks
- Finalizing!

When AI-powered chatbots and image generators first came on the scene, I was admittedly a little skeptical. It was mostly because the news headlines—at least, the ones my algorithm was feeding me—were fear-inducing (see: People fear being replaced by AI and ChatGPT). But it was also because I didn't know how any of it worked.
