Cloud Foundations Assessment

A “CDI Cloud Central” Offering

The Cloud Foundations Assessment is a 2-part assessment to get Customers ready for the journey to the cloud. These assessments will provide information around what it will take to move the current environment to the cloud as well as migration options for adoption.

The Feasibility Assessment provides the initial information for your environment and enables CDI to confirm if a move to the cloud is right for you. At the end of this assessment, CDI will be able to provide you with reporting around baseline options for the cloud based on your environment

The Readiness Assessment is the next stage in your journey to the cloud. This assessment will provide you with additional detail on where your environment will best fit in a cloud vDC.

By diving deeper in the workloads discovered during the Feasibility Assessment, CDI can provide a direct path to new native services. Migration methodology and planning will be the focus of this engagement.

Primary Goals:

- Help build a modern IT organization through agile approaches to capture and implement business requirements.
- Use reusable deployment packages that align with security, compliance, and management policies.
- Maintain a functional Azure platform in alignment with operational procedures.
- Review and approve the use of cloud-native tools.
- Standardize and automate commonly needed platform components and solutions over time.

Activities Include:

- | | |
|--|--|
| <ul style="list-style-type: none"> • Review of inventory (overall structure and resources of current environment) • Review of networking requirements • Review of daily processes (department based) • Review of security structure and overall governance • Review of application data (platform, dependencies, etc.) • Report - Workload qualification/fit • Report – General application review (IaaS, PaaS, SaaS) • Report – Network qualification/fit • Report – Cloud Services (review of terminology based on technology requirements) | <ul style="list-style-type: none"> • Defining governance model for vDC • Defining application(s) recommended solution • Defining security and compliance requirements for a hybrid environment • Defining networking model for hybrid environment • Creating a migration path for PaaS and SaaS based workloads • Creating a migration path for IaaS and data • Creating a migration plan budgetary sheet |
