Who we are

The Data Warehouse solution

Who we are

Founded in 2016

Focus on Microsoft Dynamics ERP and BI implementation, maintenance and custom development

Integration via data: Decade-long Dynamics and BI experience

Holistic approach to system implementation – operation, data, people

In depth understanding of business issues and its data analytics aspects

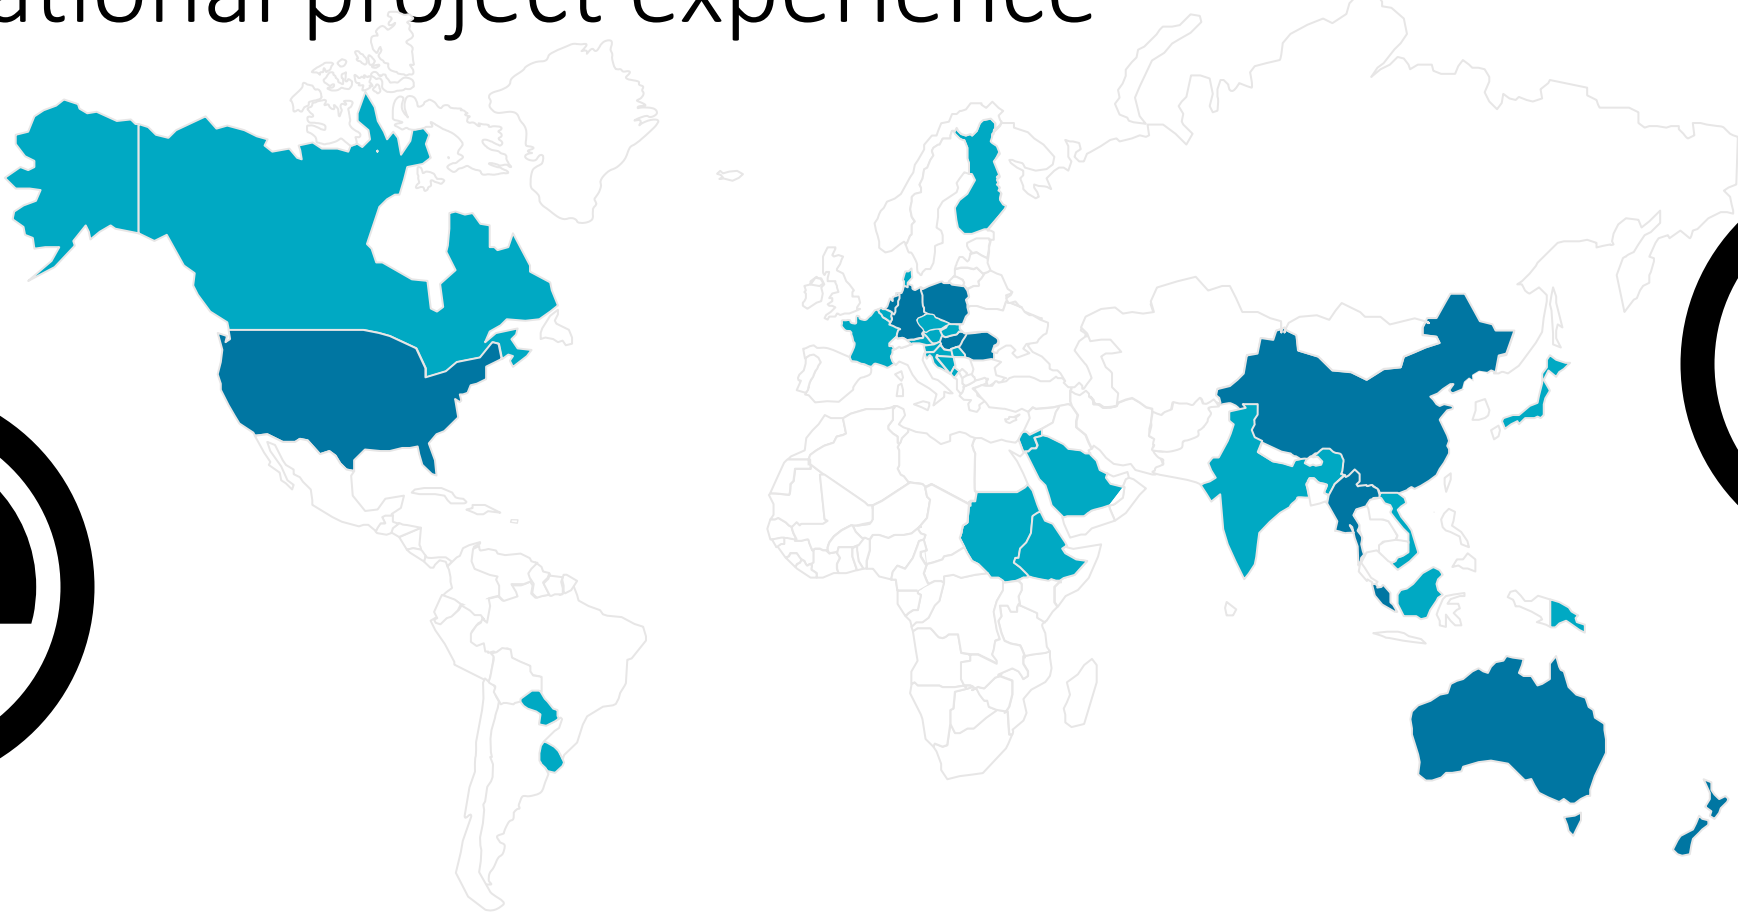

Immense experience in both Microsoft Cloud- and On-Premise Business Applications

International project experience

50+
Years
experience

50+
Dynamics AX
implementations

5
Continents wide
project
experience

Light blue – Project experience in the given country by an employee, but related to a previous position of her/him

The Data Warehouse solution

BIZTUP Data Warehouse for Dynamics 365 F&O and Dynamics AX

Unique - Plug and play data warehouse solution

Versatile – Supporting Dynamics 365 F&O or AX 2012, both cloud and on-premise

Extracts key data from Dynamics, and transforms into optimal structure for reporting; and loads into a data warehouse

Ready to use - Data structure mirrors business processes, availability of pre-built KPI's

Robust infrastructure - Extensive logging and load metrics, easy maintenance for the IT department

Optional – Two possible architectures: Traditional (available On-premise only) or Transactional (for immediate loads)

Why to choose our Data Warehouse solution?

Simple - No need to bother with complex table relationships, built with standard SQL tools

Outcome-driven – Dimensions and measures built for business users

Comprehensive – Built-in financial dimension handling and multi-company capabilities

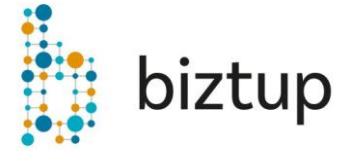

Maximum performance – Reliable and fast technology, near real time data capabilities

Well-grounded decisions – Extensive drill-down capabilities for comprehensive reporting covering five major business domains

Implementation methodology

No upfront analysis needed - Easy and fast implementation

Saving enormous resources - Pre-built tools like common business scenarios and usual reporting requirements: keys to the data warehouse

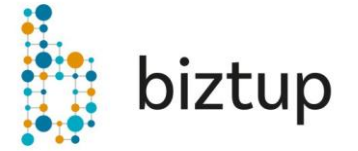

Implementation support on-demand – The solution can be deployed by internal IT team easily, but Biztup can provide implementation support at any part of the process

Scalable – Because of the usage of standard SQL tools, it is very easy to extend the system with basic SQL knowledge

Improved performance – based on the experience of already implemented systems

Replication of huge databases in the data warehouse: 300+ million records, 120+ tables

Sync time reduction: From several days to 35-40 minutes (Traditional) or to less than 2 minutes (Transactional)

Designed to support Common Data Model

Massive data reduction – the number of records can be reduced by 90%, number of tables by 85% (compared to the original databases)

Daily user load is less than 10 seconds (using Transactional architecture)

Possible use cases

If you feel like losing money on a daily basis, but you can't really tell where is the root of the problem – You neither can invest a fortune in this case to build a system to find out, nor can you spend years on implementing it. You need our data warehouse in this case: simple, quick, to have immediate results.

Where time really matters - If the cost of having undesired amount of stock is high, or the adaption to market changes in pricing can lead to immediate market share changes, if the cost of not delivering on time is unacceptable – to mention a few examples

Data is the companies' most valuable asset. Time is the most rigorous constraint. Our Data Warehouse is designed to take full advantage in both data and time dimensions in nowadays competitive environment.

Thank you for your attention!

Looking forward working with you!
