

ROOTCLOUD Aftermarket Operation for Auto parts manufacturers

DPM stands for Digital Performance Management. With the ROOTCLOUD 4.0 Platform, OT equipment data, and IT system data, DPM bridges IT and OT sides with Industrial Internet technologies, helping the manufacturing industry to identify performance losses and track and record results of optimization strategies in a closed loop. Under the new environment, performance management has undergone a fundamental transformation.

RootCloud and Microsoft provide an end-to-end solution for smart manufacturing, not only to meet the needs of enterprise-level infrastructure in global business development, but also to bring the experience of world-class smart factory operations to customers through the comprehensive integration of Azure data science and RootCloud's industry Know-How. The solution also improves IT/OT governance capabilities to meet the requirements of security, compliance and hybrid cloud in overseas deployments.
